**SEASON AND CROP
REPORT
TAMILNADU
2008-09 (Fasli 1418)**

**Department of Economics and Statistics
Chennai—600 006**

PREFACE

Area occupied by the agricultural sector amounts to 61% of total geographical area of the state. At present primary sector's contribution to Tamil Nadu's GDP is 11.12 percent (at 1999-2000 constant prices) whereas it provides gainful employment for about 60 percent of the rural work force. Performance of agricultural sector mainly depends upon natural forces such as rainfall, temperature, climate etc., with the result the aberration of monsoon leads to fluctuations in area and production.

The agricultural production is to be stepped up to ensure food availability for the increasing population and well being of the farming community through appropriate farm strategy. As the land is mostly inelastic in nature, the area under cultivation has not to be increased beyond certain limit. Now, area available for cultivation is saturated or even it starts declining mainly due to bulging urbanization. Hence the only option available for the State is to step up food production by increasing productivity and fine tuning of the extension services to meet the growing requirements of the rising population in the State.

The Season and Crop Report – Tamil Nadu -2008-09 (Fasli 1418) contains a seam of information and data on status of rainfall, land use pattern, sources of irrigation, area, production and productivity, agricultural wages, wholesale price trend and also the comparative analysis of various States under area and production of food grains.

Crop wise area and land use pattern were arrived at based on the revenue records as finalised at the time of Jamabandhi in each district. The estimates of the productivity and production of various crops were made based on the crop cutting experiment carried out with the joint efforts of the Departments of Economics and Statistics, Agriculture and Horticulture and Plantation crops.

The service rendered by the following officials of this directorate for the timely publication of this report is highly appreciated.

EXECUTIVE SUMMARY

Rainfall is one of the dominant factors responsible for crop production. The weather and rainfall can set in motion favourable or unfavourable factors which considerably influence the harvest from the fields. During the initial period of 2008-09, the State experienced favourable seasonal conditions and in the 75 years history of Mettur dam, as a 15th year, the Mettur Reservoir was opened for Kuruvai cultivation on the scheduled date of 12th June. This has helped to cover the entire area under Kuruvai. Though the Samba season started with favourable note, the Samba crops were severely affected due to heavy rain during the month of November 2008 in view of "NISHA" cyclone and caused severe damage to an extent of 5.97 lakh hect. of various crops.

The seasonwise rainfall picture shows that during the Southwest Monsoon period an excess of 5.5% rainfall was recorded over the normal rainfall. Northeast Monsoon period showed an upward trend and recorded 28.2% of excess rainfall. During the winter season, the rainfall recorded was 7.7 m.m. against the normal rainfall of 35.3 m.m., whereas, in the Hot weather period actual and normal rainfall was more or less same. During the year 2008-09, the storage capacity of various water bodies in the State was also found comfortable.

As a result of timely release of Mettur dam for Kuruvai cultivation in the delta districts i.e. on 12.6.2008, the area under Kuruvai showed a perceptible increase of 3.45 lakh hect. over the previous year area of 2.95 lakh hect. Likewise area under Samba and

Navarai also marked an upward trend when comparing to the year 2007-08.

Eventhough area increase was 7.96% over that of the previous year, the increase in production was only 2.85% This disproportion was due to decrease in productivity during the year 2008-09 over the previous year. That too mainly during the Samba Season.

Area, Production and productivity of Jowar recorded a decreasing trend over the previous year. In respect of Bajra, the Area and production have decreased, as against it, productivity has shown a slight upward trend, when comparing to the year 2007-08. Ragi being one of the nutrient rich food crop, its area has significantly decreased i.e. nearly 3.87% over the previous year hence total production showed an downward trend.

Maize is one of the food crops in Tamil Nadu. In recent years, its area, productivity and production have substantially increased. Area nearly 28.29% has increased over the previous year, production 55.28% has increased and productivity has increased 21.01%

During the year 2008-09, when comparing it with that of the previous year, Area and Production under the remaining cereals have decreased except Korra, for which Area had decreased, whereas production has slightly increased because of increase in productivity.

Considering the dietary importance of Pulses and its requirements, in

recent years special efforts have been taken both by the National and State Government for its Area expansion and also for productivity increase. Even then, the area under prime pulses i.e. Greengram and Blackgram have considerably decreased over the previous year.

In terms of production, barring blackgram, the remaining pulses showed a downward trend over the previous year.

The unseasonal rain received during the months of March 2009 caused extreme damage on the standing pulses crop in delta district. This has also caused for the poor performance of its production.

When comparing the year 2008-09 with that of the previous year area as well as production under Sugarcane decreased upto 12.8% and 13.8% respectively. Various reasons are attributed for Sugarcane area decrease such as crop rotation, disinterest of farmers etc.

Overall Area under Spices and Condiments such as Chillies, Turmeric, Coriander, Tamarind etc. is more or less same when comparing it with that of the previous year.

As far as fruits are concerned, the extent remain same as was in the previous year. As against it, production has marginally decreased over the previous year. The reason for such decrease could be the pest attack and unseasonal rain in the month of March 2009.

Area under the vegetable crops such as Tapioca, Sweet Potato, Brinjal, Cabbage and other Vegetables has decreased in various degrees over the previous year. On the other hand, the extent of Potato, Onion,

Brinjal and Lady's finger has marginally increased when compared it with that of the previous year. In respect of Tomato, the area remain more or less same as was in the previous year.

Eventhough the extent has decreased under Potato, its production has showed an upward trend. Sweet potato and Cabbage area as well as Production decreased nearly 40% over the previous year. Area and Production are in the same line in respect of the remaining vegetables.

Among the Non-Food crops, Groundnut, Coconut, Cotton, Gingelly and Sunflower constitute 2/3rd of its total extent. Other than Cotton, the remaining crops extent over previous year has decreased. As far as Sunflower is concerned, its area has decreased upto 41.7% over previous year and its production also decreased to 51.1%.

The remaining nonfood crops production also decreased over the previous year on par with its area.

In general, the overall performance of Agriculture sector during the year 2008-09 is in the same line as was in the previous year i.e. 2007-08.

The State average farm harvest price and wholesale price have registered an increasing trend under almost all commodities.

3. SOURCES OF IRRIGATION

Irrigation is the artificial application of water to the soil for growth of plants.

3.1 Sources of Irrigation

Water is an important determinant factor of production of crops in agriculture sector. Intensive and extensive cultivation of land depend mainly on the availability of water. Medium and minor irrigation schemes are implemented in the state for augmenting the irrigation for agriculture. The various sources of irrigation are canals, tanks, tube wells, Open wells and springs. The number of sources of irrigation are furnished in the following table.

3.2 Area Irrigated

The net area irrigated by different sources during 08-09 was 2931113 ha as against 2863823 ha in 07-08 showing a decrease of 67290 ha or 2.3% over the previous year. The net area irrigated during 08-09 constituted 58.1% of the net area sown in the state. Villupuram district is at the top with 232486 ha net area irrigated. However the highest percentage of the net area irrigated to the net area sown was recorded in Thiruvarur District with 96.4% followed by Kancheepuram District with 91.6% and Thiruvallur with 83.9% whereas the lowest percentage was recorded in The Nilgiris district with 0.4%. The following table shows the net area irrigated by various sources compared with 07-08.

SOURCEWISE NET AREA IRRIGATED 08-09

3.2.1 Canals (Including System Tanks)

Canals are the major source of irrigation in Tamilnadu. As the system tanks get supply from a permanent storage like reservoirs, dams etc. the area irrigated by this source is classified under canals. During 08-09, Canal irrigation accounted for 26.1% the net area irrigated by all sources in the state. The net area irrigated by canals including system tanks during the year was 765527 ha as against 752654 ha in 07-08 recording an increase of 12873 ha i.e. 1.7%. The net area irrigated by canals is the highest in Thiruvarur district with 148913 ha (19.5%) followed by Thanjavur district with 133168 ha (17.4%) and Nagapattinam district with 130446 ha (17.0%) of the total net area irrigated by canals in the State.

3.2.2 Tanks (Non-System Tanks Only)

The non-system tanks which are fed partly from their independent catchment areas and partly from the diversion of river water and jungle streams depend fully on rain. The net area irrigated by non-system tanks during the year 08-09 is 540281 ha as against 506070 ha in 07-08 registering an increase of 34211 ha or 6.8% over previous year. The extent of area

irrigated by tanks during the year is the highest in Pudukottai district with 14.0% followed by Sivagangai district with 13.0% and Kancheepuram district with 11.5%.

3.2.3 Wells

Wells are the principal source of irrigation in Tamilnadu. During the year under review, open wells and tube-wells/borewells continued to be the principal source of irrigation. The net area irrigated by open wells and tube-wells / borewells together accounted for 1614082 ha (about 55.1 % of the total net area irrigated) in 08-09 as against 1593681 ha in 07-08 showing an increase of 20401 ha i.e. 1.3%. The net area irrigated by wells during the year 08-09 was the highest in Villupuram district with 10.7% of the total net area irrigated by the wells in the state followed by 7.2% in Thiruvannamalai district and 6.3% in Salem district

6. AREA, PRODUCTION AND PRODUCTIVITY

Factors such as fertility of land, monsoon behaviour, rainfall, irrigation, application of fertilizers, climatic conditions, marketing facilities, prices, availability of agricultural labourers etc. determine the area and productivity of any crop. The cropwise analysis of production between current year and previous year is presented in the table below.

The production of foodgrains during the year under report is 7101735 tonnes as against 6581639 tonnes in 07-08 recording a remarkable increase of 520096 tonnes or 7.9%. Rice is major constituent accounting for 72.99% of the total foodgrain production in the state.
