

SEASON AND CROP REPORT TAMILNADU 2009-10 (Fasli 1419)

Department of Economics and Statistics
Chennai - 600 006

PREFACE

Agriculture is the main stay of the State economy in that its role is fundamentally instrumental in terms of market, factor and product contributions. Area under agriculture comes to 61 per cent of the total geographical area of Tamil Nadu. As of 2009-10 (AE) primary sector's contribution to Tamil Nadu's GDP was put at 9.16 percent (at 2004-05 constant prices) while it provides gainful employment for about 60 percent of the rural work force. Performance of agricultural sector mainly hinges on natural forces such as spatio-temporal distribution of rainfall, temperature, climate etc., with the result any aberration of monsoon from the normal pattern brings about vast fluctuations in area and production.

Considering the crucial and dynamic variables such as growing population, changing income elasticity of demand for food items and rising real per capita income, the agricultural sector should clock an annual growth rate of 4 per cent per annum. Besides resilience of farm sector, a sustained step-up in agricultural production is imperative to ensure food security and nutritional security for the increasing population and well-being of the farming community. As the land is mostly inelastic in nature, the area under cultivation could not be increased beyond certain limit. Now, area available for cultivation gets saturated or even starts declining mainly due to bulging urbanization and growing housing activities. Hence, the only choice available for the State is to accelerate food production by increasing productivity. This could be possible through fine-tuning the extension services, coupled with intensive use of package of inputs and application of cutting-edge farm technology to meet the growing needs of the rising population in the State.

The Department of Economics and Statistics is designated as SASA (State Agricultural Statistics Authority) for furnishing official agricultural statistics in Tamil Nadu. With this binding this department is collecting, collating and furnishing all types of agricultural statistics to Government of India as well as Government of Tamil Nadu, other user departments and common public.

The Season and Crop Report is the principal annual publication released by this department which contains a seam of information and data on important aspects such as status of rainfall, land use pattern, sources of irrigation, area, production and productivity, agricultural wages, wholesale price trend and also the comparative analysis of various States under area and production of food grains. It puts the matter into perspective. A longitudinal study of agricultural sector can be made by examining and analyzing the time-series data meticulously.

Crop wise area and land use pattern were arrived at based on the revenue records as finalized at the time of Jamabandhi in each district. The estimates of the productivity and production of various crops were made based on the crop cutting experiment carried out with the joint efforts of the Departments of Economics and Statistics, Agriculture and Horticulture and Plantation crops.

The services rendered by the following officials of this Department for the timely preparation and publication of this report is highly appreciated.

EXECUTIVE SUMMARY

The year 2009-10 recorded an average rainfall of 937.8 mm which was higher by 2.9 % against the normal rainfall of 911.6 mm. Rainfall was excess in 4 districts, normal in 24 districts and deficient in 3 districts. The rainfall was highest (2368.6mm) in the Nilgiris District and lowest (503.2mm) in Virudhunagar district. During the North-East Monsoon, the prime mover of agricultural activities in Tamilnadu, the precipitation in 2009-10 was found normal in 16 districts, excess in 9 districts and deficient in 6 districts. The position during South-West Monsoon was also found satisfactory. One observation worthy to note is that the quantum and spread was not uniform across the districts. A disparate trend is noticed between the four monsoon periods. It has a direct bearing on the area brought under the plough and production obtained.

A look at the land use pattern reveals that the net sown area stood a 37.5 % of State's total geographical area of 130 lakh ha, a tad lower than that of (38.7%) during 2008-09. Area sown more than once and gross area sown was also a shade higher than that of during 2008-09. Erode district accounted for a larger chunk of area (11%) under forest among the districts. The proportion of area

under forest was at 16.3. % against the ideal ratio of one third of total geographical area, as recommended by the National Commission on Agriculture Cropping intensity, defined as the ratio between gross sown area and net sown area stood at 1.139 during 2009-10. It was highest in Nagapattinam district (1.713) and lowest in Ramanathapuram district (1.000).

Among sources of irrigation wells accounted for 55%, followed by canals (26%) and tanks (18%) of total net area irrigated of 29 lakhs ha. in 2009-10. Net area irrigated formed 59% of the net sown area. It shows that the agricultural and allied activities are monsoon – dependent. Therefore, agriculture dances to the tune played by the monsoon. Number of reservoirs varies from one in Cuddalore district to 13 in Thirunelveli district.

A perusal of date of opening the Mettur reservoir, the lifeline of the State's agriculture, shows that it was opened more than a month later on July 28th against the scheduled opening date of 12th June of every year. It had impacted the raising of kuruvai cultivation in the Cauvery delta regions. The delay created ripple effects in these regions.

Considering the area irrigated under different crops, the following picture had emerged for 2009-10:

Crop	Gross area sown (in ha).	Gross area irrigated (in ha).	% of gross area irrigated to gross area sown
Foodgrains	3034124	1894798	62.4
Food crops	4098090	2575027	62.8
Non-food crops	1473620	663207	45.0
Food and Non-food crops	5571710	3238234	58.1

Area under total food crops declined by 4 % from 42 lakh ha. during 2008-09 to 41 lakh ha. in 2009-10. Dip in area is noticed for Paddy (4.5%), Cholam (7.9%), Ragi (8.6%) and other millets (12.8%). With respect to non-food crops the area decreased from 15.5 lakh ha to 14.73 lakh ha, the fall being 5.3 per cent. The aggregate total area under all crops dwindled by 4.3 per cent from 58.2 lakh ha. to 55.72 lakh ha. However, the decline in area under major crops had not significantly impinged upon total agricultural

production thanks to significant jack up in yield rate.

With respect to foodgrain production, it went up by 5.7% from 71 lakh tonnes during 2008-09 to 75 lakh tonnes in 2009-10, increase being 5.6 %. Production of cereals rose by 5.3 % from 69 lakh tonnes to 73 lakh tonnes. Pulses increased from 1.67 lakh tonnes to 2 lakh tonnes, showing a growth of 22.1%. Thus the decline in area coverage had adequately been compensated by increase in production and yield rate.

Paddy, the staple crop of the State, witnessed a moderate decrease in area, whereas production and yield rate increased sizably. Season-wise, kuruvai recorded a fall in all aspects – area, production and yield rate whereas samba clocked positive signs in terms of area, production and yield rate. In the case of Navarai, there was a dip in area covered but increase in yield rate. Dip in production is noticed with respect to ragi, maize, sugarcane, chillies, groundnut, gingelly, sunflower, etc., Yield rate fell in the case of bengalgram, turmeric, sugarcane, tapioca, banana etc.,

4. SOURCES OF IRRIGATION

Irrigation is the artificial application of water to the soil for growth of plants.

Sources of Irrigation

Water is an important determinant factor of production of crops in agriculture sector. Intensive and extensive cultivation of land depend mainly on the availability of water. Medium and minor irrigation schemes are implemented in the state for augmenting the irrigation for agriculture. The various sources of irrigation are canals, tanks, tube wells, Open wells and springs. The number of sources of irrigation are furnished in the following table.

The net area irrigated during 09-10 constituted 56.8% of the net area sown in the state. Villupuram district is at the top with 236484 ha net area irrigated. However the highest percentage of the net area irrigated to the net area sown was recorded in Thiruvarur District with 97.4% followed by Thanjavur District with 85.6% and Kancheepuram with 85.0% whereas the lowest percentage was recorded in The Nilgiris district with 0.5%. SOURCEWISE NET AREA IRRIGATED 09-10

Canals (Including System Tanks)

Canals are the major source of irrigation in Tamilnadu. As the system tanks get supply from a permanent storage like reservoirs, dams etc. the area irrigated by this source is classified under canals. During 09-10, Canal irrigation accounted for 26.4% the net area irrigated by all sources in the state. The net area irrigated by canals including system tanks during the year was 757090 ha as against 765527 ha in 08-09 recording an decrease of 8437 ha i.e. 1.1%. The net area irrigated by canals is the highest in Thiruvavur district with 150564 ha (19.9%) followed by Thanjavur district with 134554 ha (17.8%) and Nagapattinam district with 123696 ha (16.3%) of the total net area irrigated by canals in the State.

Tanks (Non-System Tanks Only)

The non-system tanks which are fed partly from their independent catchment areas and partly from the diversion of river water and jungle streams depend fully on rain. The net area irrigated by non-system tanks during the year 09-10 is 503491 ha as against 540281 ha in 08-09 registering a decrease of 36790 ha or 6.8% over previous year. The extent of area

irrigated by tanks during the year is the highest in Pudukottai district with 14.9% followed by Kancheepuram district with 13.6% and Sivagangai district with 12.8%.

Wells

Wells are the principal source of irrigation in Tamilnadu. During the year under review, open wells and tube-wells/bore-wells continued to be the principal source of irrigation. The net area irrigated by open wells and tube-wells / bore-wells together accounted for 1593968 ha (about 55.7 % of the total net area irrigated) in 09-10 as against 1614082 ha in 08-09 showing a decrease of 20114 ha i.e. 1.2%. The net area irrigated by wells during the year 09-10 was the highest in Villupuram district with 11.3% of the total net area irrigated by the wells in the state followed by 7.7% in Thiruvannamalai district and 6.4% in Salem district
