322-15—1

PREFACE

Agriculture continues to be the linchpin of the State economy. Its instrumental roles are product, factor and market contributions to other sectors besides providing nutritional security, livelihood security and earning foreign exchange. The linkages between agriculture and industry can hardly be overemphasized. Agricultural development is an effective antidote to poverty reduction. The State had a total irrigated area of 35.19 lakh ha. (60%) out of the gross cropped area of 58.90 lakh ha. during 2011-12. It underscores the point that agriculture is rain-dependent oscillating in tune with the degree of spatio-temporal distribution of rainfall. As agriculture is susceptible to vagaries of monsoon, the cultivators have to face severe hardships in terms of alternative economic fortunes at frequent intervals.

Policy makers in Tamil Nadu are in dire need of time series and district-wise data and information on various facets of the agricultural economy such as area, production and yield rate for different crops – major and minor. Structural transformation taking place in Tamil Nadu agriculture is well captured in this document. In the current issue three new sections have been incorporated. They are adoption of High Yield Varieties, Variability in Rainfall and Distribution of Number of Farmers and Operational Holdings. District-wise information helps the planners in locating the regional imbalances, chalking out strategies, formulating new schemes and projects and delineating the objectives of agricultural schemes in a right perspective. This document is providing a springboard for researching into problems and constraints confronted by the agricultural sector.

The Department of Economics and Statistics is bringing out this document annually. The data and information provided in this document pertain to 2011-12. I hope this document is much useful to administrators, planners, research scholars and M.Phil students. Efforts of Officers and Staff of the Department expended in preparation of this valuable document are highly commended. Feedback from the users of the document is solicited and the suggestions will be incorporated in the ensuing Issue.

TAMIL NADU MAP

PART I

- An Overview

EXECUTIVE SUMMARY

Agriculture differs from other economic activities in the sense that behaviour of monsoon influences the performance of agriculture to a great extent. When the spread and quantum of rainfall is ideal, there will be normal area coverage, production and yield rates. Due to climate changes, the occurrence of an ideal spatio temporal distribution of precipitation has become unpredictable. Without a crystal ball it is impossible to say what will be next. Under these circumstances, farmers are exposed to vagaries of monsoon and burn their fingers badly taking up the agricultural operations.

In 2011-12, agricultural sector behaved normally in the sense that there were no much variations in area, production and yield. Rainfall during 2011-12 was more or less normal. Gross are sown and gross area irrigated under food and non-food crops stood at 58.90 lakh ha. and 35.19 lakh ha. respectively. Forty per cent of the gross area sown was rainfed. Rainfed farming explains the multi dimensionality of the vulnerability.

There was a definite shift in land put to non-agricultural uses. It increased from 10 percent of the total geographical area during 1961-62 to 16.7 percent during 2011-12. Correspondingly net sown area decreased from 46 percent to 38 percent. It has vase policy implications.

Cropping intensity increased from 1.16 during 2010-11 to 1.18 during 2011-12. Wells accounted for 57 percent of a total net area irrigated of 29.64 lakh

ha. followed by canal 25 percent, tanks 18 percent. Irrigation intensity stood at 1.19 during 2011-12. Paddy formed 50.7 percent of the gross area irrigated of 58.90 lakh ha. Paddy made up 32.3 per cent of gross cropped area of 58.90 lakh ha., 73.47 percent of production of foodgrains of 101.52 lakh tonnes during 2011-12. Rice production stayed at 74.59 lakh tonnes. Yield rate was at 3918 kgs/ha. during 2011-12.

There was an upward trend in respect of production of major crops with a few exceptions during 2011-12. Growth in yield rate of major crops was positive save onion and Bengalgram. Discernable growth was noticed in terms of area, production and yield rate under fruits and vegetables. Viewed from the above perspective the year 2011-12 was good for agriculture.

Latest 9th Agricultural Census data on Distribution of Farmers and Operational Holdings reveals that asymmetry is being noticed in both. It causes the vulnerability of small and marginal farmers to many agricultural shocks. As a result, they eke out a hand-to-mouth existence. Small and marginal farmers need strong policy focus to wriggle out of the miasma of poverty.

The influence of Green Revolution and adoption of High Yield Varieties is profound regarding Paddy, Cumbu, Ragi and Cholam. There is an urgent need to cover all crops with the high yielding varieties to enhance both productivity and production.

Fortunes of agricultural sector are determined by the fickleness of weather conditions which are beyond the control of human efforts. What the farmers need

is steady and assured employment and income, convergence in scheme implementation, putting them in the centre stage in development planning, huge infusion of public investments, supply chain management during the post harvest period, keeping the middle man at bay in marketing the farm produce, strengthening the flow of institutional credit, revamping the extension services, prioritizing the crop diversification in favour of horticultural crops (which have high price and income elasticity of demand), etc. will go towards ameliorating the socio economic conditions of the farmers to a great extent.

REVIEW OF PERFORMANCE OF MAJOR AND MINOR CROPS DURING 2011-12

The year 2011-12 repeated almost last year's performance in terms of area brought under cultivation. It registered a growth rate of 3.38 per cent compared to 3.24 per cent growth during 2010-11. Area under paddy and vegetables dipped by a meagre 0.10 per cent and 3 per cent respectively, whereas area under total cereals, total pulses, sugar cane , spices and condiments, total food crops and total non food crops increased by 0.19 per cent, 4.74 per cent, 1.1 per cent, 12.71 per cent, 1.82 per cent and 7.01 per cent respectively. Area increase under spices and condiments was more pronounced (12.71%). Gross area sown stood at 32.09 ha. Under food grains, 43.47 lakh ha. was under food crops, 15.42 lakh ha. under non food crops and 58.90 lakh ha.

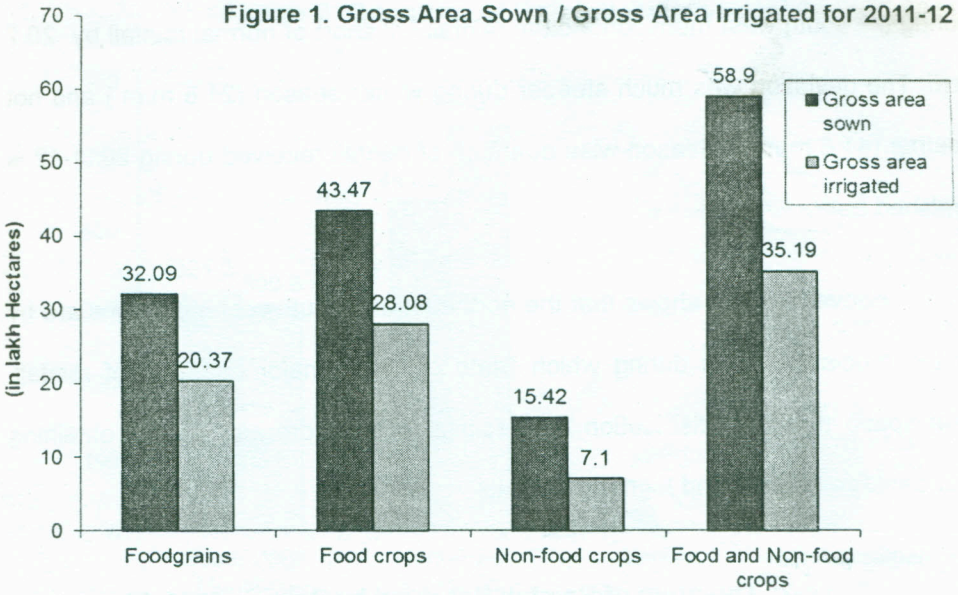

322-15—5

under food and non food crops combined together. Percentage of gross area irrigated under food and non food crops combined to gross area sown worked out to 59.7 per cent. It reveals that about 40 per cent of gross area sown is rain-dependent. Rain dependence implies that the State's farming is vulnerable to vagaries of monsoon and high and frequent fluctuations in area covered and output and yield rate obtained.

Table-1: Gross Area Sown Vis-a-vis Gross Area Irrigated

Crop	Gross area sown (in lakh ha).	Gross area irrigated (in lakh ha).	Percentage of gross area irrigated to gross area sown
Foodgrains	32.09	20.37	63.5
Food crops	43.47	28.08	64.6
Non-food crops	15.42	7.10	46.0
Food and Non-food crops	58.90	35.19	59.7

Figure 1. Gross Area Sown / Gross Area Irrigated for 2011-12

1. Rainfall Pattern:

The share of each season in total rainfall is as follows: 57.7 per cent by north-east monsoon, 32.1 per cent by south-west monsoon, 9.2% by hot weather and 1 per cent by winter. Precipitation was excess during the north east monsoon, normal during south west monsoon deficit during hot weather and scanty during the winter season. The actual annual rainfall was put at 937.1 m.m. during 2011-12 against the normal rainfall of 921.6m.m. for the State. The actual precipitation exceeded the normal rainfall by 15.5 m.m.

During the south west monsoon, actual rainfall fell short of normal rainfall by 20.7 m.m. The deviation was much steeper during winter season (21.8 m.m.) and hot weather (41.6 m.m.). Season-wise quantum of rainfall received during 2011-12 is furnished below:

Above analysis shows that the northeast and southwest monsoons are by far the crucial seasons during which State received major quantum of rainfall. Ideal spatio temporal distribution of precipitation is a prerequisite for obtaining abundant farm output and higher yield rate.

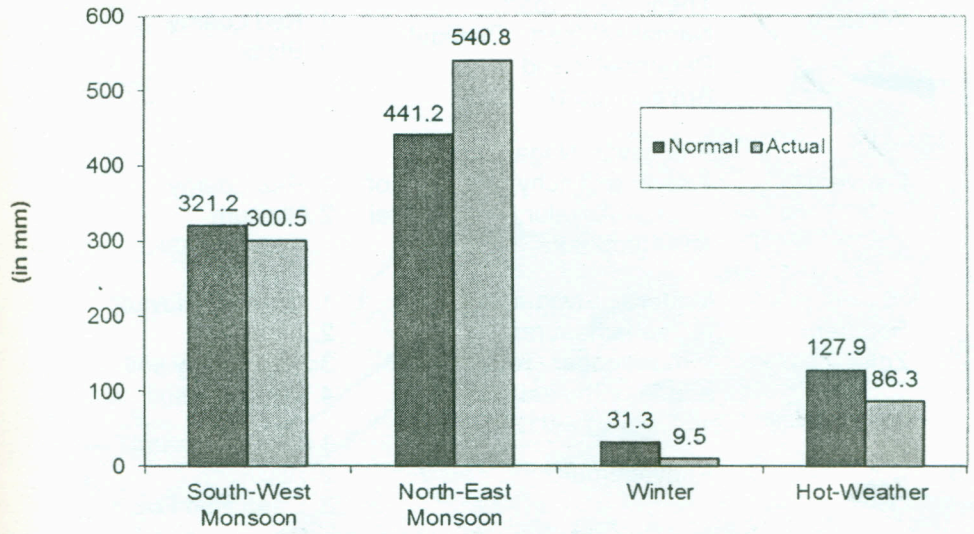

Table-2: Quantum of Rainfall Received by Season-2011-12

(in mm)

Season	Normal	Actual	Seasonal Contribution (percentage)	Percentage Variation to Normal
1. South-West Monsoon	321.2	300.5	32.1	-6.4
2. North-East Monsoon	441.2	540.8	57.7	22.6
3.Winter	31.3	9.5	1.0	-69.6
4.Hot-Weather	127.9	86.3	9.2	-32.5
Total	921.6	937.1	100.0	1.7

Excess rainfall 20% and above; Normal rainfall 19 % to (-) 19%
Deficit Rainfall (-)20% to (-) 59 %; Scanty rainfall (-) 60% to (-) 99%

Agro Climatic Zones in Tamil Nadu

1. Trend in Land Use Pattern:

. The total geographical area of the State is 1.30 crore ha. It has been classified according to different types of land during 2011-12 prescribed in the table below.

Table-3 - Trend in Land Use Pattern

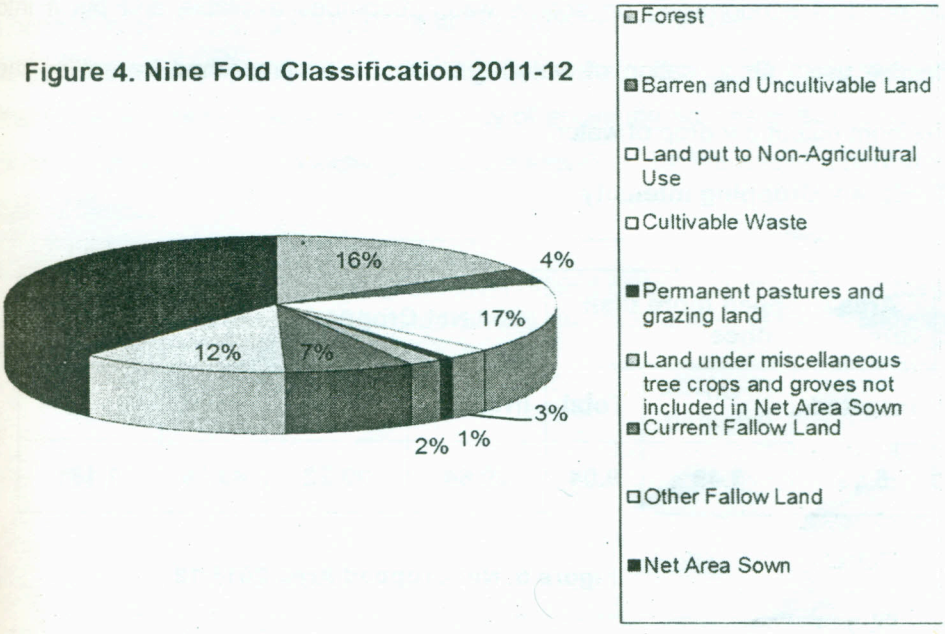

Sl. No.	Category	2010-11	2011-12
	Total Geographical Area	13033116 (100.0)	13033116 (100.0)
1.	Forest	2125475 (16.3)	2125475 (16.3)
2.	Barren and Uncultivable Land	489253 (3.8)	488557 (3.7)
3.	Land put to Non-Agricultural Use	2177034 (16.7)	2180732 (16.7)
4.	Cultivable Waste	330938 (2.5)	329117 (2.5)
5.	Permanent pastures and grazing land	109568 (0.8)	109568 (0.8)
6.	Land under miscellaneous tree crops and groves not included in Net Area Sown	252080 (1.9)	252468 (1.9)
7.	Current Fallow Land	1014937 (7.8)	967037 (7.4)
8.	Other Fallow Land	1580173 (12.1)	1594305 (12.2)
9.	Net Area Sown	4953658 (38.0)	4985857 (38.3)

Figures in brackets indicate percentage to Total Geographical Area.

The table reveals that very small variations were being noticed under current fallow and other fallow and net area sown. During this period the land put to non agricultural uses less than the last year which reveals that the area available for cultivation is being converted in to non agricultural use. The share of

total forest cover still falls short of one-third of the norm, as recommended by the National Commission on Agriculture. It is of paramount importance that not only the extent of forest cover but also the quality and productivity of forest are to be improved to a great extent.

Figure 4. Nine Fold Classification 2011-12

3. Cropping Intensity:

Net Area sown increased from 49.54 lakh ha. during 2010-11 to 49.86 lakh ha. during 2011-12 registering, a growth rate of a meager 0.65 percent. The improvement in area sown more than once rose by 13.12 percent. Gross area sown increased by 2.4 percent during this period. Cropping intensity i.e. gross area sown divided by net sown area was at 1.18 during 2011-12 compared to 1.16 during the previous year. Cropping intensity is a measure of both quantum and

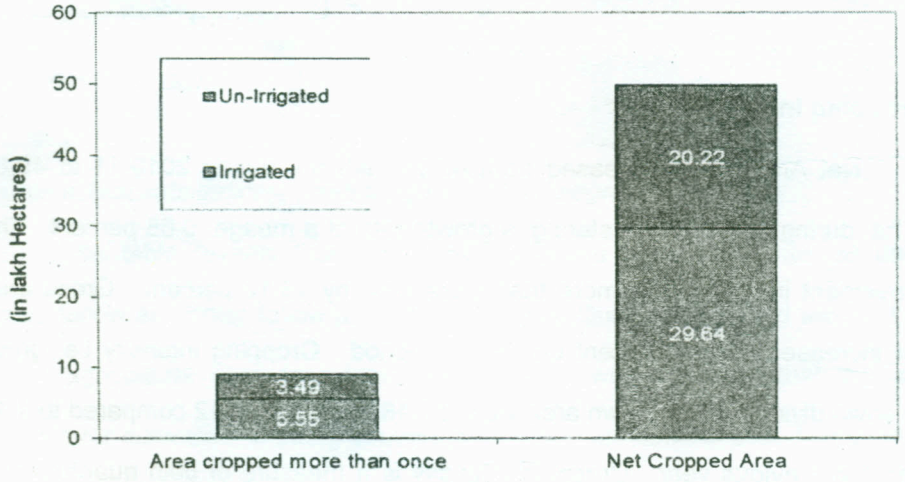

spread of precipitation, soil moisture index and gross area irrigated. Tamil Nadu agriculture is water-starved so that the cropping intensity is not of higher order. Cropping intensity was found highest in Thiruvarur (1.814) and Nagapattinam (1.814) and lowest in Ramanathapuram (1) and The Nilgiris (1). The State is in dire need of economizing on scarce water resources available and put it into effective use. Optimization of water use can be accomplished by getting the maximum output per drop of water.

Table 4 : Cropping Intensity

(in lakh ha.)

Area Cropped more than once			Net Cropped Area			Cropping Intensity
Irrigated	Un-irrigated	Total	Irrigated	Un-irrigated	Total	
5.55	3.49	9.04	29.64	20.22	49.86	1.181

Figure 5. Net Cropped Area 2011-12

4. District Contribution to Net Area Sown:

Out of the total geographical area of 1303316 ha., Villupuram district accounted for a sizeable net area sown of 332220 ha. (6.72), other districts whose share exceeded 4 per cent mark are: Cuddalore (4.4 %), Salem (4.6 %), Thiruvannamalai (4%), Thanjavur (4%), Dindigul (4.8 %). The productivity of land depends upon a host of factors such as fertility of soil, climate and weather, richness in pH.* level, availability of all minerals and other required soil nutrients and abundance of precipitation and irrigation water. It may be mentioned that there are vast differences in the availability of above ingredients of soil across the districts. Difference in productivity level are explained by the availability of these critical factors.

* pH is a measurement of the level of acid or alkali in the soil. In the pH range of 0 to 14 a reading of below 7 shows an acidy and of above 7 shows an alkali.

322-15—7

Table-5 District Contribution to Net Area Sown 2011-12

(In ha.)

Sl. No.	District	Total Geographical Area	Net area sown	% of net area sown to	
				Geographical area	State total

31.	Nilgiris	254485	75741	29.8	1.5
32.	Kanniyakumari	167200	78524	47.0	1.6
	TOTAL	**13033116**	**4985857**	**38.3**	**100**

5. Sources of Irrigation:

Sources of irrigation comprise canals, reservoirs, tanks and wells (tube wells and open wells). Out of the total sources of 1820844, open wells alone accounted for 82.70 per cent, tube wells 17.3 per cent, tanks (2.26%), reservoir (0.04%) and canals (0.13%). It may be concluded that wells are single largest source of irrigation, owned both by individuals and Government.

Table 6: Sources of Irrigation 2011-12

Source	Number
1. CANALS a) Govt.	2237
b) Private	2
2. RESERVOIRS	81
3. TANKS	
a) Ayacut above 40 ha.	7985
b) Ayacut below 40 ha.	33142
Total	**41127**
4. WELLS	
A) Tube Wells & Others	
a) Govt.	566
b) Private	314434
Total	**315000**
B) OPEN WELLS	
a) Govt.	372
b) Private	1505472
Total	**1505844**
TOTAL NO. OF WELLS (A+B)	**1820844**

6. Area Irrigated by Different Sources:

Even though canals and tanks formed relatively a lower share in terms of number of sources, they constituted a larger share to total in area irrigated. Sourcewise canal irrigated an area of 746337 ha., tanks 527892 ha., wells 1682957 ha. and others 6835 ha. out of the total net area irrigated of 2964027 ha. Share of canals, tanks, wells and others in net area irrigated was in the order of 25.2 per cent, 17.8 per cent, 56.8 per cent and 0.2 per cent during 2011-12.

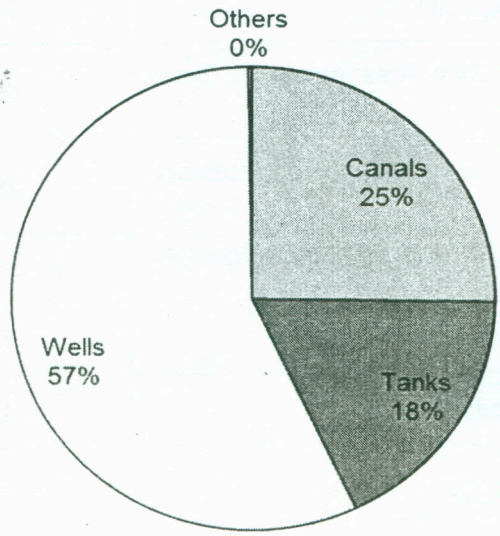

It may be mentioned that the tanks where the SIDA-aided Social Forestry Plantations raised, sedimentation had been formed with the result the water-holding capacity of the tanks got diminished. It is indispensable to deepen the irrigation tanks under the Mahatma Gandhi Rural Employment Guarantee Scheme. Ultimately, the additional area may be brought under cultivation or the quantum of water stored will prolong the period of irrigation or both.

Table – 7 : Source-wise Net Area Irrigated

(in ha.)

Sources		Net Area Irrigated			
		2011-12		2010-11	
		Area	%	Area	%
1.	**Canals** (including system tanks)	746337	25.2	747188	25.7
2.	Tanks	527898	17.8	533214	18.3
3.	Wells	1682957	56.8	1622659	55.7
	a) Tube wells / Bore wells	406327	13.7	403377	13.9
	b) Open wells	1276630	43.1	1219282	41.9

	TOTAL	2964027	100.0	2912129	100.0

Figure 6. Sourcewise Net Area Irrigated 2011-12

322-15—8

Gross area irrigated was put at 35.19 lakh ha. Percentage of gross area irrigated to gross area sown came to be 42. Percentage of net area irrigated to net area sown worked out to 58.78 during 2011-12. **Irrigation intensity**, a measure of gross area irrigated area to net area irrigated stood at 1.19. Irrigation intensity was highest in Dharmapuri (1.46) and Salem (1.44) and lowest and The Nilgiris (1), Ramanathapuram (1) and Sivagangai (1). Irrigation intensity is a crucial indicator with which we may size up the potential output that can be realized in a region. Higher the irrigation intensity, higher will be the scope for raising potential agricultural output. Therefore, the degree of irrigation intensity is to be stepped up to meet the challenges of growing population. In this context, additional irrigation potential is to be created and harnessed through construction of large, medium and command area development projects.

Table – 8 – Irrigation Intensity

(lakh ha.)

1.	Gross Area Irrigated	:	35.19
2.	Percentage of Gross Area Irrigated to Gross Area sown	:	60.42
3.	Net Area Irrigated excluding supplementary wells	:	29.64
4.	Percentage of Net area irrigated to Net area sown	:	58.78
5.	Area Irrigated more than once	:	5.55
6.	Irrigation Intensity	:	1.19

7. Crop wise Gross Area Irrigated:

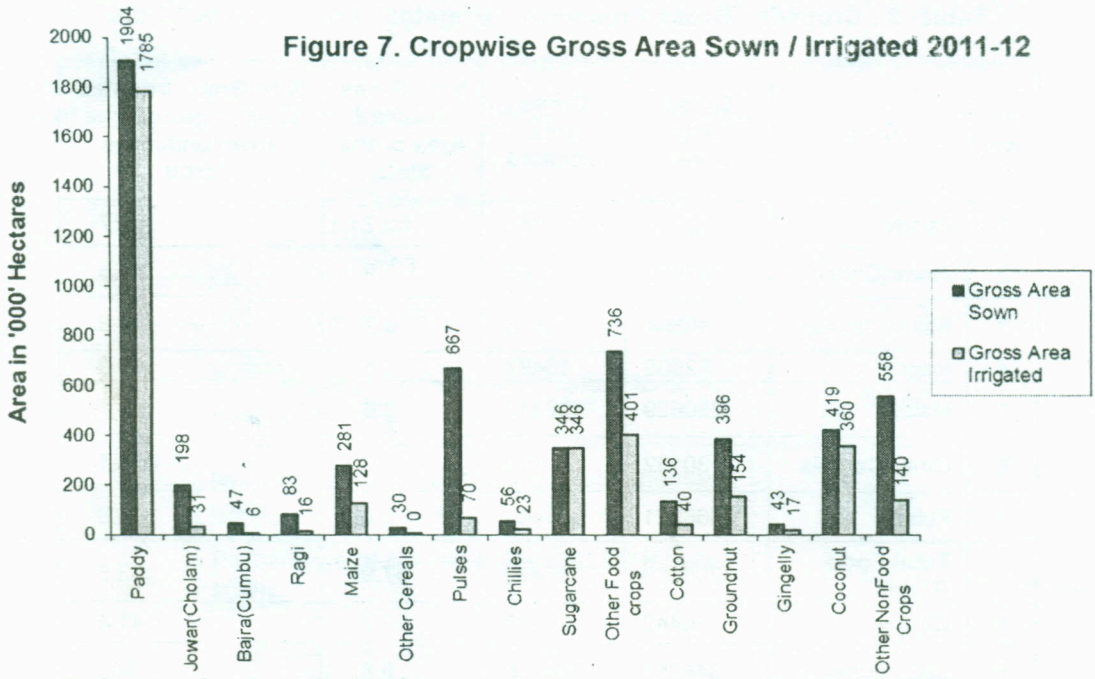

Out of the total gross area of 3518822 ha. irrigated food crops consisted of 79.80 per cent and non-food crops 20.20 per cent during 2011-12. Paddy constituted a sizeable area of 1784762 ha. (50.77%). Total pulses contributed 10.6 per cent to total irrigated area of 70444 ha. Non-food crops coconut accounted for 10.22 per cent, followed by groundnut 4.39 per cent. The gross area irrigated increased by 5.12 per cent from 3347557 ha. during 2010-11 to 3518822 ha. during 2011-12.

Table- 9 : Cropwise Gross Area sown / Irrigated and its relative share

Sl. No	Crop	Gross area sown	Gross area Irrigated	% to Gross Irrigated Area of the State	% to Gross Irrigated Area to gross Area sown under the crop
1	Paddy	1903772	1784762	50.7	93.7

Figure 7. Cropwise Gross Area Sown / Irrigated 2011-12

8. Group wise Area under Crops:

The area under crops soared from 5752664 ha. during 2010-11 to 5889672 ha. During 2011-12, the growth rate being 2.38 per cent. Food grains

accounted for 54.48 per cent of total area of 5889672 ha. during 2011-12. Under other food groups sugarcane constituted 6.08 per cent and fruits and vegetables 6.62 per cents. Under non-food crops the share of oilseeds, fodder crops and fibre stood at 14.85 per cent, 4.07 per cent and 2.31 per cent respectively.

Table – 10 : Gross cropped area under Principal Crops (in Hectares)

Crop		2011-12		2010-11		% var. over prev. year.

Figure 10. Districtwise Area under Paddy 2011-12

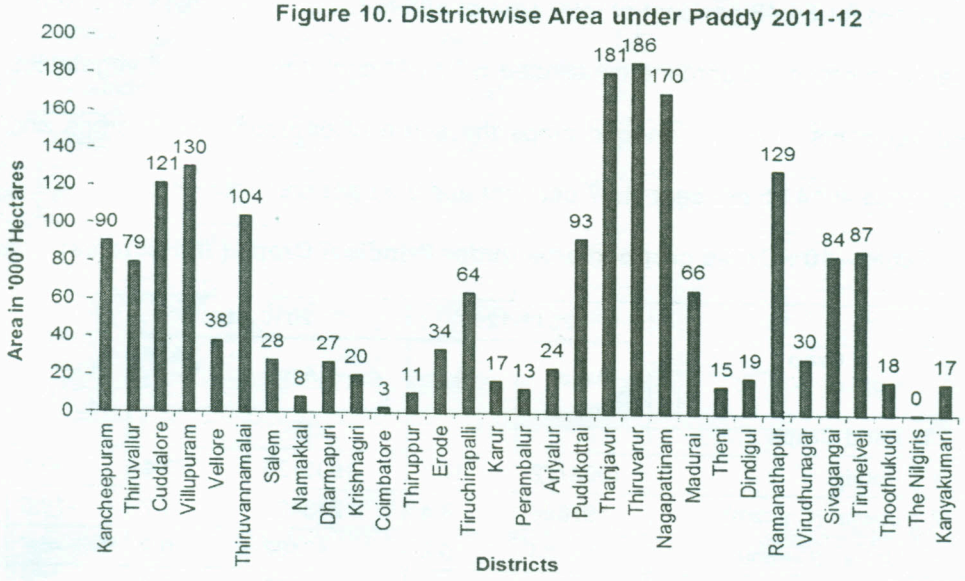

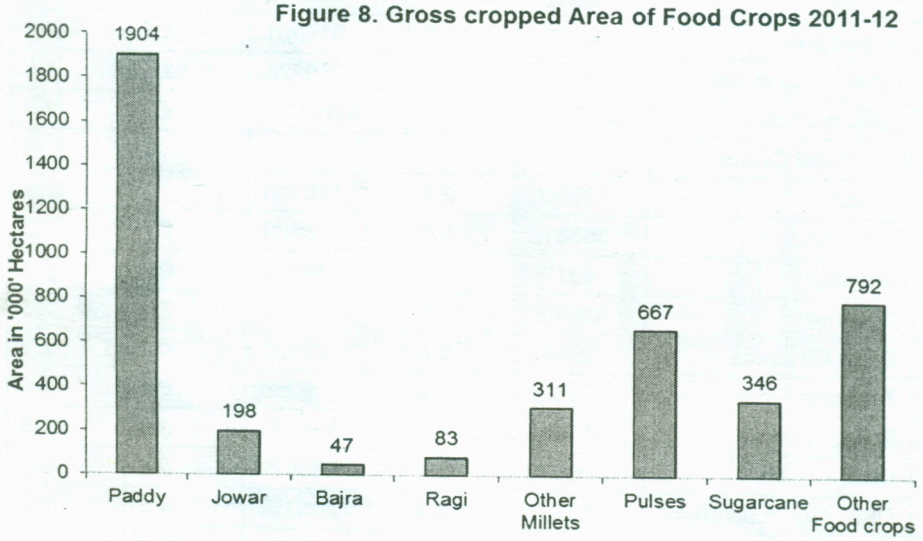

Figure 8. Gross cropped Area of Food Crops 2011-12

Out of 101.52 lakh ha. of total foodgrains, rice alone accounted for 73.47 percent, followed by maize (16.70) and pulses (3.64). Cereals made up 96.36 percent of total foodgrain production during 2011-12. There was a vast difference between production level of 2010-11 and 2011-12 to the tune of 34 percent

Table – 11 : Cropwise Production of Foodgrains

Crop		2011-12		2010-11	
		Production	%	Production	%

9. Area under Food Crops:

9.1 Paddy:

Paddy is the staple crop of the State. It is worth noting that the Mettur Reservoir was opened on 5.6.2011 well in advance of scheduled date of opening of 12th June. It was first time in the history of the Mettur Reservoir. Paddy is being raised in three seasons – Kar / Kuruvai / Sornavari, Samba / Thalady / pishanam and Navarai / Kodai. During 2011-12 paddy covered an area of 1903772 ha. of which 178462 ha. (93.75%) was irrigated and 119010 ha. (6.25%) was unirrigated. Districts of Thiruvarur, Nagapattinam and Thanjavur district put together accounted for 28.22 per cent of total area under paddy.

Table – 12 : Distribution of Area under Paddy by Districts 2011-12

(in ha.)

	DISTRICT	Area under Paddy	% to State	Gross Cropped area	% of Paddy area to Gross Cropped area
1	Chennai	0	0	0	0
2	Kancheepuram	90419	4.7	126642	71.4
3	Thiruvallur	79219	4.2	133148	59.5
4	Cuddalore	120983	6.4	299690	40.4

31	The Nilgiris	399	0	75744	0.5
32	Kanyakumari	16617	0.9	87676	19
STATE		**1903772**	**100**	**5889672**	**32.3**

As far as paddy crop is concerned, paddy is a hydrophilic crop or water guzzler, i.e., it requires a lot of irrigation water – high duty crop. If the water is scarce, it impinges upon the area, production and productivity of rice crop to a great extent.

Figure 10. Districtwise Area under Paddy 2011-12

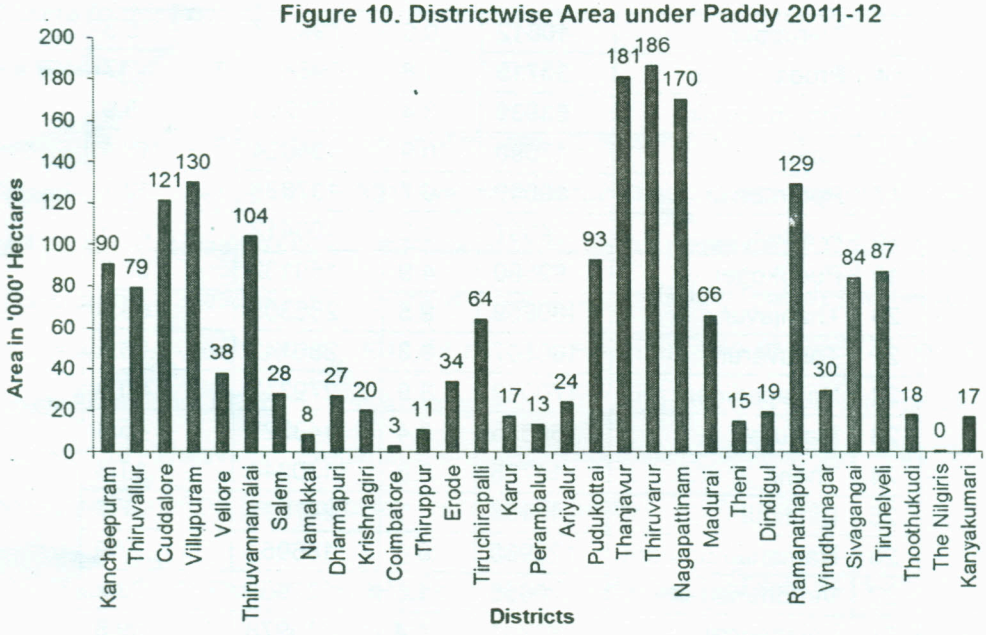

Table – 13 : Paddy- Area, Production and Yield Rate

Season	Area in ha			In terms of Rice					
				Production in tonnes			Productivity in Kg/ha.		
	2011-12	2010-11	% Var.	2011-12	2010-11	% Var.	2011-12	2010-11	% Var.
1.Kuruvai	335715	293030	14.6	1384666	1046910	32.3	4125	3573	15.4
2.Samba	1444271	1480531	-2.4	5592375	4273700	30.9	3872	2887	34.1
3.Navarai	123786	132165	-6.3	481616	471805	2.1	3891	3570	9
All Seasons	1903772	1905726	-0.1	7458657	5792415	28.8	3918	3039	28.9

Seen seasonwise, samba crop accounted for 75.86 per cent of area of 19 lakh ha. under paddy, and 74.95 per cent of total rice production of 74.59 lakh

tonnes. Next to Samba, Kar season formed 17.64 per cent of area and 18.56 per cent of total production. Contribution of Navarai crop stood at 6.50 per cent in area coverage and 6.47 per cent in total production of rice. Seen districtwise, districts of Thanjavur and Thiruvarur combined together made up 28 per cent of total production of 74.59 lakh tones of rice.. The erstwhile Thanjavur district contines to be rice bowl of Tamil Nadu. In terms of yield rate, yield rate exceeded 5 tonne mark in the districts of Kanyakumari, Thirunelveli, Dindigul and Theni, whereas in Cuddalore district it was lowest (2052 Kgs/ha.). The System of Rice Intensification (SRI) Scheme which is cost-effect and output-enhancing innovative intervention has come a long way in augmentation of production and yield rate of rice. The SRI is based on basic principles like developing a nursery rice in soil nutrients and does not require flooding, early planting of single seedling in the main field using nylon ropes as markers and planting with a wider spacing between single seedling. Second generation green revolution in rice cultivation is long overdue in the State.

9.2 Cholam

Cholam is rich in carbohydrate. As economic development takes place, its prominence of cholam in food basket has been on the decline. During 2011-12 area under cholam was put at 197696 ha. This crop was predominant in the districts of Coimbatore, Thiruchirappalli and Dindugal. These districts combined together made up 39 per cent of total area of 197696 ha. Total production worked out to 252522 tonnes whereas yield rate was at 1277 kgs.

322-15—10

Yiled rate was highest in Theni district (3375) and lowest in Namakkal district (855 kg/ha.)

Cholam covered an area of 197696 ha. during 2011-12 against 243465 ha during 2010-11, the decline being 18.8 per cent whereas the total production of cholam increased by 2.2 per cent from 246981 tonnes to 252522 tonnes. There was a spectacular increase of 25.9 per cent in yield rate-1014 kgs/ha to 1277 kgs/ha. Relevant information is shown below.

Table-14 Cholam – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	197696	243465	-18.8
Production (in Tonnes)	252522	246981	2.2
Yield rate (in Kg/ha)	1277	1014	25.9

9.3 Cumbu:

Like cholam, cumbu is rich in carbohydrate. Its prominence in food basket has been on the decrease. During 2011-12 it covered an area of 46664 ha. during 2011-12. Villupuram district alone accounted for a share of 27.48 per cent.

Production was at 11447 ha. and yield rate was put at 2453 kgs/ha. Since this crops is raised in rainfed condition, there is a vast gap between potential and actual yield. Yield rate was highest in Thoothukudi district and lowest in Tiruvallur district.

With respect to cumbu area declined by 5.7 per cent from 49482 ha. durin g2010-11 to 46664 ha. during 2011-12. There was a leap frogging growth 47.9 percent with regard to production which increased from 77369 tonnes to 114447

tonnes. The quantum jump of 56.8 percent was noticed with respect to yield rate – 2453 kgs/ha. vis-a-vis 1564 kgs/ha.

Table-15 Cumbu – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	46664	49482	-5.7
Production (in Tonnes)	114447	77369	47.9
Yield rate (in Kg/ha)	2453	1564	56.8

9.4 Ragi:

Ragi crop is rich in carbo-hydrate having high fibre content. Ragi is instrumental in reducing malnutrition and undernutrition, and contributes significantly to psychological development of the children. The district of Dharmapuri and Krishnagiri constituted 74 per cent of total ragi area of 82805 ha. Total production stood at 224862 tonnes. Average yield rate was at 2716 kgs – it is highest in Dharmapuri (3013 kgs/ha.) and lowest in Ramanathapuram (1709 kgs/ha.)

Table-16 Ragi – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	82805	75650	9.5
Production (in Tonnes)	224862	171096	31.4
Yield rate (in Kg/ha)	2716	2262	20.1

9.5 Maize:

Maize is a multipurpose cereal. Demand for this produce is on the increase. During 2011-12 this crop covered an area of 280629 ha. – Perambalur and Dindugal district accounted for a larger chunk of 29 per cent out of 280629 ha. Total maize production worked out to 1695467 tonnes. Average yield came to 6042 kgs/ha. Thiruppur stood first (8221 kgs/ha.) in yield rate. It was lowest in Cuddalore district (1746 kgs/ha.) There is an urgent need to bring additional area under maize and step up in yield rate significantly in view of growing population and increasing demand for it.

9.6 Pulses:

As population, per capita income and urbanization are burgeoning, the demand for pulses goes up. Demand for pulses is income-elastic. Past trend shows that the fortunes of agriculture are widely fluctuating. In tune with the vagaries of monsoon, there are swings in the supply of pulses. Eventually, there is an upward trend in the prices of pulses. In order to arrest the unbridled rising prices of pulses, cultivation of pulses should get a thrust in crop planning. There is an urgent need to boost the pulses production to meet the challenges of pulses requirement.

Among pulses blackgram accounted for 53.40 per cent in terms of area and 45.84 per cent in terms of production. Next to blackgram, greengram contributes sizeably to area and production of total pulses. As pulses are being

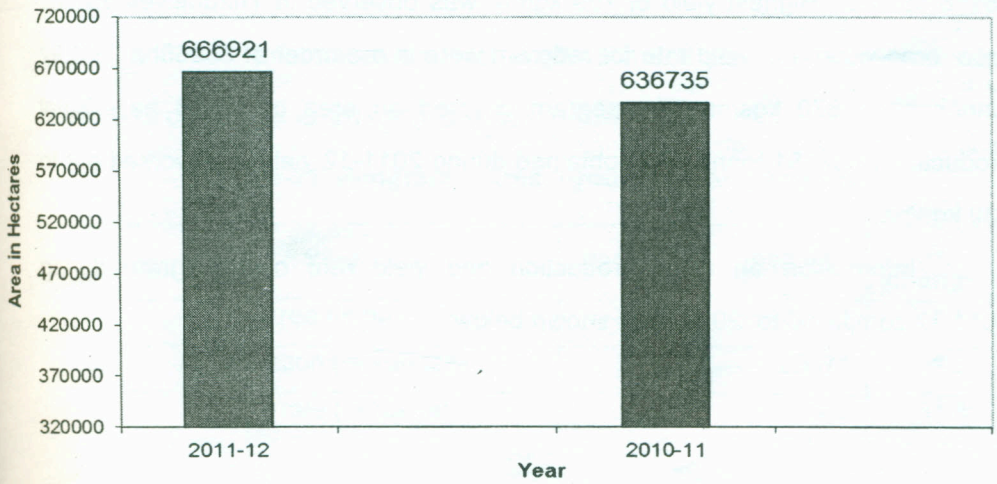

raised both in irrigated and rainfed conditions, there exists a vast untapped potential in all the districts.

Table-17 Pulses – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	666921	636735	4.7
Production (in Tonnes)	369263	245191	50.6
Yield rate (in Kg/ha)	554	385	43.9

Area under pulses increased by 4.7 percent from 636735 ha. during 2010-11 to 666921 ha. during 2011-12. Production level rose from 245191 tonnes to 369263 tonnes, the growth being an impressive 50.6 percent. There was an increase of 44 percent in yield rate.

Figure 11. Area of Pulses 2010-11 and 2011-12

322-15—11

Table - 18 – Variety-wise Area, Production and Yield Rate of Pulses

Variety	Area (ha)	%	Production (tonnes)	%	Yield (kg/ha)
i. Redgram	35968	6.23	31292	8.02	870
ii. Greengram	164069	28.42	85118	21.82	519
iii. Blackgram	308263	53.40	178816	45.84	580
iv. Horsegram	68969	11.95	37181	8.15	539

Blackgram is predominantly grown in the districts of Cuddalore, Nagapattinam and Thiruvarur. These three districts combined together made up 47.58 per cent of total area of 308263 ha. during 2011-12. Cuddalore district (29656 tonnes) came first in total production of 178816 tonnes. Thirunelveli district realized an yield rate of 959 kgs/ha. With respect to greengram an area of 164069 ha. was covered during 2011-12, yielding an output of 85118 tonnes. This crop is predominant in the districts of Thiruvarur and Nagapattinam accounting for an 41 per cent of total area of 164069 ha. and 26 per cent of total production of 85118 tonnes. Highest yield of 769 kg/ha. was observed in Thirunelveli district. Area, production and yield rate for redgram were in the order of 35968ha., 31292 tonnes and 870 kgs/ha. Horsegram covered an area of 68968 ha. Total production of 37181 tonnes was obtained during 2011-12 yield rate worked out to 539 kgs/ha.

Information on area, production and yield rate of blackgram during 2011-12 compared to 2010-11 is shown below:

Table-19 Blackgram – Area, Production and Yield Rate

Item	2011-12	2010-11	% change
Area (in ha)	308263	304432	1.3
Production (in Tonnes)	178816	123011	45.4
Yield rate (in Kg/ha)	580	404	43.6

Information on area, production and yield rate of greengram during 2011-12 compared to 2010-11 is shown below:

Table-20 Greengram – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	164069	171666	-4.4
Production (in Tonnes)	85118	57683	47.6
Yield rate (in Kg/ha)	519	336	54.5

Information on area, production and yield rate of redgram during 2011-12 compared to 2010-11 is shown below:

Table-21 Redgram – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	35968	35751	0.6
Production (in Tonnes)	31292	23671	32.2
Yield rate (in Kg/ha)	870	662	31.4

9.7 Cashew:

Cashew is a rainfed crop. Value addition flows from cashew. It is a sizable foreign exchange earner. Cashew is predominantly grown in the district of Cuddalore, Pudukottai, Sivagangai, etc. Area under cashew increased by 0.3 percent from 96710ha. during 2010-11 to 97033 ha. 2011-12. Production went up from 39996 tonnes to 25532 tonnes, the growth being 0.4 percent Yield rate remained constant at 263 kgs./ha. Relevant information is furnished below:

Table-22 Cashewnut – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	97033	96710	0.3
Production (in Tonnes)	25532	39996	-36.16
Yield rate (in Kg/ha)	263	414	-36.47

9.8 Groundnut:

The importance of groundnut can hardly be overstated. There is a staggering imbalance between the demand for and supply of oilseeds in general and groundnut in particular. There is a vast gap between actual and potential yield. This crop is mostly raised as a rainfed one. Productivity falls short of the standard fixed by the Agricultural Universities. Out of 385612 ha. under groundnut, the districts of Thiruvannamalai and Vellore accounted for 26 per cent of total area. Total production stood at 1060654 tonnes of which Thiruvannamalai formed 40 per cent of production. Yield rate came to 2751 kgs/ha- highest in

Thiruvarur district (5629 kgs) and lowest in Ramanathapuram district (1390 kgs/ha).

Information on area, production and yield rate of groundnut during 2011-12 compared to 2010-11 is shown below:

Table-23 Groundnut – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	385612	385509	0.03
Production (in Tonnes)	1060654	895638	18.42
Yield rate (in Kg/ha)	2751	2323	18.42

9.9 Gingelly:

This crop has multiple uses – medicinal value and used as seasoning ingrediant in cooking. The crop covered an area of 43175 ha. The State produced an output of 26447 tonnes. Yield rate stood at 613 kgs/ha. during 2011-12. Gingelly in Erode district is predominant in terms of area, production and yield rate.

Table- 24 Gingelly – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	43175	48189	-10.4
Production (in Tonnes)	26447	25387	4.18
Yield rate (in Kg/ha)	613	527	16.3

9.10 Sunflower:

Sunflower is a value addition crop and is rich in oil content. The State covered an area of 13610 ha. obtaining a total production of 24622 tonnes and yield rate of 1809 kgs/ha. Karur district tops the list in terms of area, production and yield. It is imperative to realize the potential yield rate and expand the area coverage in years to come. This crop is exposed to the attack of parrot when the seeds become ripe. Farmer stand to lose on this account to a great extent.

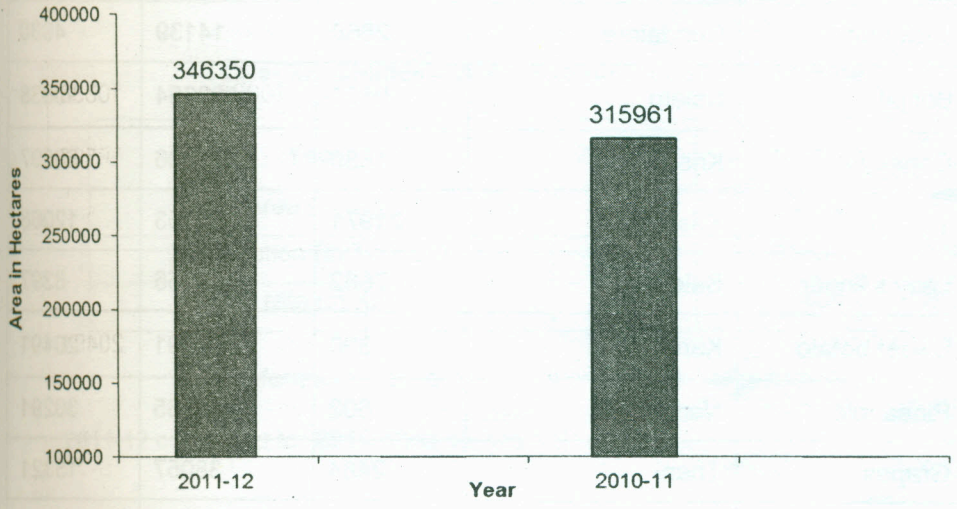

9.11 Sugarcane:

Sugarcane crop is a value addition crop besides being hydrophilic. Districts of Villupuram, Dharmapuri and Erode put together accounted for as high as 36.12 per cent of total area of 346350 ha. covered during 2011-12. Villupuram district headed the list with 8062159 tonnes (20%). District of Karur finished first in terms of yield per ha (137). Even though the State Government has been hiking the State Advised Price for sugarcane periodically, the farmers could not keep their head above water. Despite the fact that sugarcane is money spinner, the cultivation of this crop is stifled by a number of problems and constraints.

Table-25 Sugarcane – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	346350	315961	9.6
Production (in Tonnes)	38974842	34251796	13.8
Yield rate (in Kg/ha)	113	108	4.62

Figure 12. Area of SugarCane 2010-11 and 2011-12

9.12 Fruits and Vegetables:

Demand for fruits and vegetables in income-elastic. They are value addition crops. It is imperative to augment the production and yields of these lucrative crops in the wake of swelling urbanization, growing real per capita income and bulging population. The shelf life of most of these crops is short-lived. Therefore demand side exerts heave pressure on prices of these fruits and vegetables. Market period is momentary. Table below delineates data on area, production and yield of fruits and vegetables.

322-15—13

Table – 26 : Area, Production and Yield of Fruits and Vegetables – 2011-12

Type	Predominantly growing District	Area (Ha)	Production (tonnes)	Yield Rate (kgs/ha)
1	2	3	4	5
Banana	Thoothukudi	103107	4505435	43695
Mango	Krishnagiri	141140	626392	4438
Jack fruit	Cuddalore	2868	14139	4930

10. Distribution of Number of Farmers and Operational Holdings:

According to the 9th Agricultural Census 2010-11 total number of farmers stood at 81.18 lakh having total operational holdings of 64.58 lakh ha. Per farmer holding size stayed at as low as 0.8 ha. which is uneconomic to cultivate. Out of the total 81.18 lakh farmers, marginal farmers accounted for 77 percent, followed by small farmers 14.56 percent and semi medium farmers, 6.19 percent. As regards distribution of total land holdings, 0.21 percent of large farmers possessed 5.39 percent of land holdings and medium farmers 13.06 percent. Marginal farmers held 35.48 percent of land holdings. The above figures do indicate that the distribution of land holding is much skewed. Asymmetry in the distribution of the operational holdings and number of farmers will result in low agricultural productivity and insufficient application of latest technology and package of critical inputs, low rate of saving etc. Concentration of marginal farmers in the distribution of land holdings explains the reason why they are doing subsistence farming for sustenance.

The supply curve of marginal farmer is backward-bending so that they have no incentive to work harder and prefer leisure to work after reaching a thresh-hold level of income. The concentration of marginal farmers implies that the **demographic** dividend available on the population front in the State cannot be reaped. Ultimately, the saving and investment will not be forthcoming at desired level for productive use.

Table – 34 – 9th Agriculture Census 2010-11 -Distribution of Farmers and Operational Holdings by Category of Farmers

Sl. No.	Category / Size	No.of holdings	% distribu tion	Size of operational holdings (ha.)	% distribu tion
1.	Marginal (upto 0.99)	6266372	77.19	2292031	35.32
2.	Small (1.00 to 1.99)	1181797	14.56	1643841	25.34
3.	Small Medium (2.00 to 3.99)	502332	6.19	1355476	20.89
4.	Medium (4.00 to 9.99)	150570	1.85	847372	13.06
5.	Large (10.00 & above)	17365	0.21	349517	5.39
	All sizes	**8118436**	**100.00**	**6488237**	**100.00**

11. Adoption of High Yield Varieties

Adoption of High Yield Varieties or miracle seeds is popular due to initiation of green revolution in the State as well as in the country since 1967-68. The miracle seeds are instrumented in enhancing the yield rate. Empirical evidence supports amply that in the post situation improvement in the productivity

322-15—15

is substantial compared to the pre-situation. The High Yield Varieties are being used in the cases of Paddy, Cholam, Cumbu and Ragi.

With respect to paddy, High Yielding Varieties covered an irrigated are of 17.44 lakh ha. Out of the total 17.89 lakh ha. unirrigated area in which the high yield varieties were adopted was 3 percent. Local variety of paddy accounted for only 6 percent during 2011-12. Regarding cholam, 88 percent of 1.98 lakh ha. was covered by high yield varieties and the remaining area of 12 percent was covered with local varieties.

With respect of cumbu an area of 43746 ha. (94%) used the high yield variety seeds whereas an area of 2918 ha. (6%) adopted local varieties. Regarding Ragi crop, adoption of high yield varieties worked out to 95 percent.

Figure 13. Distrinuion of Farmers and Number of Holdings as per Agriculture Census 2010-11

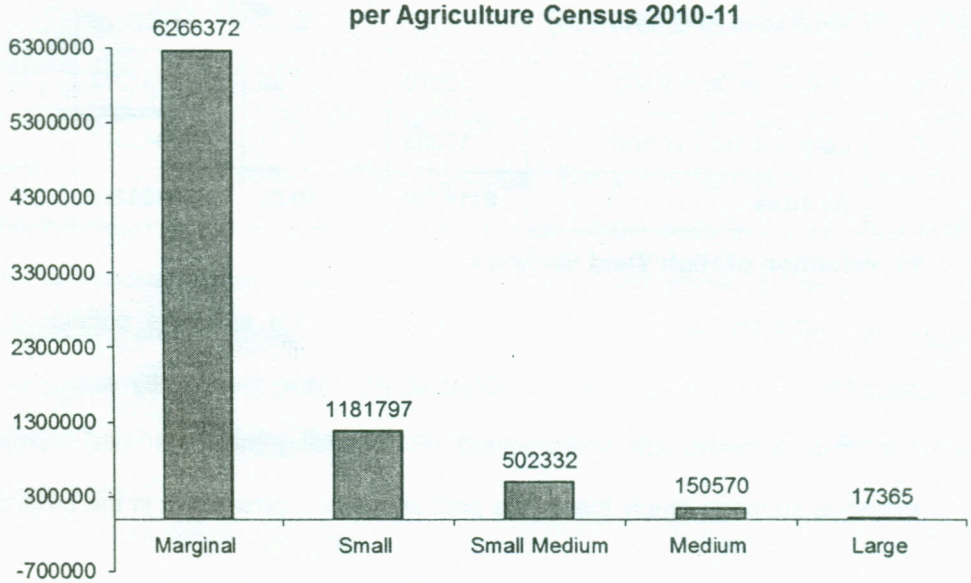

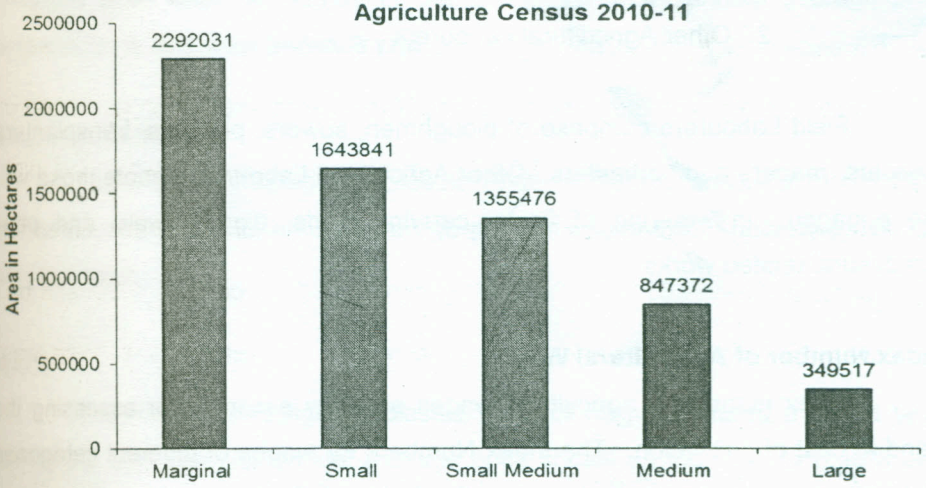

Figure 14. Distribution of Farmers and Area of Holdings as per Agriculture Census 2010-11

The above analysis boils down to this: adoption rate of high yield varieties for paddy neared centum whereas it was more than 90 percent for cholam, ragi and cumbu. It underlines that the penetration of the adoption of high yield varieties is found deeper thanks to the advent of the green revolution. It is imperative to cover uncovered crops and fill the gap found in the crops already covered so that the productivity of all crops will go up and meet the total food requirements of the State population.

8. Agricultural Wages

Classification of Agricultural Labourers:

Statistics regarding daily wages paid to Agricultural Labourers are being collected every month from 385 villages, @ one Villages per Block. The Agricultural Labourers are classified into two groups, viz.,

1. Field Labourers and
2. Other Agricultural Labourers

Field Labourers comprise of ploughmen, sowers, pluckers, transplanters, weeders, reapers and harvesters. Other Agricultural Labourers denote those who are engaged in watering of fields, carrying loads, digging wells and other Agricultural related works.

Index Number of Agricultural Wages

Index number of agricultural wages are very essential for assessing the trend in cost of cultivation. The Index Numbers for wages of different categories of Labours are being worked out on the basis of the wages prevailing in the selected villages in the state with the base year 1993-94. District-wise details of average rates of daily wages paid to certain categories of agricultural labourers for 2010-11 are given in Table VI -A. Index Number of wages paid to certain categories of agricultural labourers in Tamil Nadu for the year 2010-11 are furnished in Table VI –B.

9. WHOLESALE PRICE TREND PER QUINTAL

RICE COMMON

The monthly Average Wholesale Price of Rice Common reveals an mixed trend during the fasli year. The maximum price was Rs.2411.38 in February 2012 and minimum price was Rs.1924.02 in August 2011. Its annual average price registered an increase of 8.07% in the current year when compared to the previous year.

JOWAR (CHOLAM)

The monthly Average Wholesale Price of Cholam reveals mixed trend during the fasli year. The maximum stood at Rs.1696.47 in May 2012 and the

minimum price was Rs.1435.67 in September 2011. Its annual average price increased in 8.70% over previous year.

BAJRA (CUMBU)

The monthly Average Wholesale Price of Cumbu shows a mixed trend during the fasli year. Its annual average price shows a 8.89% increase over the previous year.

RAGI

The monthly Average Wholesale Price of Ragi registered a mixed trend during the fasli year. Its annual average price shows an increase of 8.48% over the previous year.

BENGALGRAM

The monthly Average Wholesale Price of Bengal Gram revealed mixed trend during the fasli year. Its price varying between Rs.3863.38and Rs.5010.67. The annual average shows 17.18% increase over the previous year.

REDGRAM

The monthly Average Wholesale Price of Redgram registered a mixed trend with minimum price of Rs 4850.00 in July 2011 and a maximum of Rs. 5241.55 in January 2012. Its annual average shows an increase of 1.02% over the previous year.

BLACKGRAM

The monthly Average Wholesale Price shows a mixed trend with the price ranging between Rs.4556.36 and Rs.5394.98. Its annual average shows a increase of 1.02% over the previous year.

GREENGRAM

The monthly Average Wholesale Price of Greengram shows a mixed trend during the fasli year. Its annual average price shows 7.23% increase over the previous year.

GROUNDNUT PODS

The monthly Average Wholesale Price of Groundnut Pods shows a mixed trend. The annual average price registered mild increase of 22.39% over the previous year.

GINGELLY SEED

The monthly Average Wholesale Price of Gingelly Seed registered a mixed trend during the fasli year. Its annual average price shows a increase of 6.51% over previous year.

CANEGUR

The monthly Average Wholesale Price of Canegur registered a mixed trend. Its annual average price shows 8.90% increase over previous year.

CHILLIES

The monthly Average Wholesale Price of Chillies shows a mixed trend during the fasli year. Its annual average price increased of 18.27% when compared to the previous year.

CORIANDER

The monthly Average Wholesale Price shows a mixed trend during the fasli year with the maximum price stood at Rs6950.22 /-in February 2012 and the minimum price was Rs.5758.84 in June 2012-. Its annual average shows a increase of 18.27% over previous year.

TURMERIC

The monthly Average Wholesale Price of Turmeric shows a mixed trend during the fasli year. The maximum price of 11394.31 during July 2011 and minimum price of Rs.9162.68 in June 2012. Its annual average price shows an decrease of 25.12% over previous year.

TAMARIND

The monthly Average Wholesale Price of Tamarind shows a mixed trend during the fasli year. Its annual average price shows a increase of 6.68% over previous year. Month wise trend in average wholesale price of essential commodities is furnished in Table-VII-B.

PREFACE

Agriculture continues to be the linchpin of the State economy. Its instrumental roles are product, factor and market contributions to other sectors besides providing nutritional security, livelihood security and earning foreign exchange. The linkages between agriculture and industry can hardly be overemphasized. Agricultural development is an effective antidote to poverty reduction. The State had a total irrigated area of 35.19 lakh ha. (60%) out of the gross cropped area of 58.90 lakh ha. during 2011-12. It underscores the point that agriculture is rain-dependent oscillating in tune with the degree of spatio-temporal distribution of rainfall. As agriculture is susceptible to vagaries of monsoon, the cultivators have to face severe hardships in terms of alternative economic fortunes at frequent intervals.

Policy makers in Tamil Nadu are in dire need of time series and district-wise data and information on various facets of the agricultural economy such as area, production and yield rate for different crops – major and minor. Structural transformation taking place in Tamil Nadu agriculture is well captured in this document. In the current issue three new sections have been incorporated. They are adoption of High Yield Varieties, Variability in Rainfall and Distribution of Number of Farmers and Operational Holdings. District-wise information helps the planners in locating the regional imbalances, chalking out strategies, formulating new schemes and projects and delineating the objectives of agricultural schemes in a right perspective. This document is providing a springboard for researching into problems and constraints confronted by the agricultural sector.

The Department of Economics and Statistics is bringing out this document annually. The data and information provided in this document pertain to 2011-12. I hope this document is much useful to administrators, planners, research scholars and M.Phil students. Efforts of Officers and Staff of the Department expended in preparation of this valuable document are highly commended. Feedback from the users of the document is solicited and the suggestions will be incorporated in the ensuing Issue.

TAMIL NADU MAP

PART I

- An Overview

EXECUTIVE SUMMARY

Agriculture differs from other economic activities in the sense that behaviour of monsoon influences the performance of agriculture to a great extent. When the spread and quantum of rainfall is ideal, there will be normal area coverage, production and yield rates. Due to climate changes, the occurrence of an ideal spatio temporal distribution of precipitation has become unpredictable. Without a crystal ball it is impossible to say what will be next. Under these circumstances, farmers are exposed to vagaries of monsoon and burn their fingers badly taking up the agricultural operations.

In 2011-12, agricultural sector behaved normally in the sense that there were no much variations in area, production and yield. Rainfall during 2011-12 was more or less normal. Gross are sown and gross area irrigated under food and non-food crops stood at 58.90 lakh ha. and 35.19 lakh ha. respectively. Forty per cent of the gross area sown was rainfed. Rainfed farming explains the multi dimensionality of the vulnerability.

There was a definite shift in land put to non-agricultural uses. It increased from 10 percent of the total geographical area during 1961-62 to 16.7 percent during 2011-12. Correspondingly net sown area decreased from 46 percent to 38 percent. It has vase policy implications.

Cropping intensity increased from 1.16 during 2010-11 to 1.18 during 2011-12. Wells accounted for 57 percent of a total net area irrigated of 29.64 lakh

ha. followed by canal 25 percent, tanks 18 percent. Irrigation intensity stood at 1.19 during 2011-12. Paddy formed 50.7 percent of the gross area irrigated of 58.90 lakh ha. Paddy made up 32.3 per cent of gross cropped area of 58.90 lakh ha., 73.47 percent of production of foodgrains of 101.52 lakh tonnes during 2011-12. Rice production stayed at 74.59 lakh tonnes. Yield rate was at 3918 kgs/ha. during 2011-12.

There was an upward trend in respect of production of major crops with a few exceptions during 2011-12. Growth in yield rate of major crops was positive save onion and Bengalgram. Discernable growth was noticed in terms of area, production and yield rate under fruits and vegetables. Viewed from the above perspective the year 2011-12 was good for agriculture.

Latest 9th Agricultural Census data on Distribution of Farmers and Operational Holdings reveals that asymmetry is being noticed in both. It causes the vulnerability of small and marginal farmers to many agricultural shocks. As a result, they eke out a hand-to-mouth existence. Small and marginal farmers need strong policy focus to wriggle out of the miasma of poverty.

The influence of Green Revolution and adoption of High Yield Varieties is profound regarding Paddy, Cumbu, Ragi and Cholam. There is an urgent need to cover all crops with the high yielding varieties to enhance both productivity and production.

Fortunes of agricultural sector are determined by the fickleness of weather conditions which are beyond the control of human efforts. What the farmers need

is steady and assured employment and income, convergence in scheme implementation, putting them in the centre stage in development planning, huge infusion of public investments, supply chain management during the post harvest period, keeping the middle man at bay in marketing the farm produce, strengthening the flow of institutional credit, revamping the extension services, prioritizing the crop diversification in favour of horticultural crops (which have high price and income elasticity of demand), etc. will go towards ameliorating the socio economic conditions of the farmers to a great extent.

REVIEW OF PERFORMANCE OF MAJOR AND MINOR CROPS DURING 2011-12

The year 2011-12 repeated almost last year's performance in terms of area brought under cultivation. It registered a growth rate of 3.38 per cent compared to 3.24 per cent growth during 2010-11. Area under paddy and vegetables dipped by a meagre 0.10 per cent and 3 per cent respectively, whereas area under total cereals, total pulses, sugar cane , spices and condiments, total food crops and total non food crops increased by 0.19 per cent, 4.74 per cent, 1.1 per cent, 12.71 per cent, 1.82 per cent and 7.01 per cent respectively. Area increase under spices and condiments was more pronounced (12.71%). Gross area sown stood at 32.09 ha. Under food grains, 43.47 lakh ha. was under food crops, 15.42 lakh ha. under non food crops and 58.90 lakh ha.

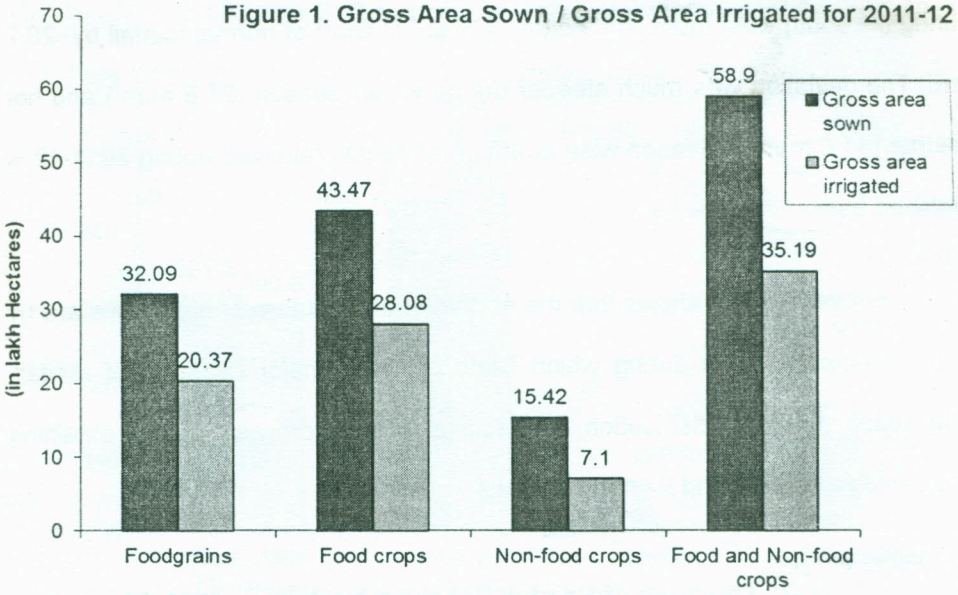

322-15—5

under food and non food crops combined together. Percentage of gross area irrigated under food and non food crops combined to gross area sown worked out to 59.7 per cent. It reveals that about 40 per cent of gross area sown is rain-dependent. Rain dependence implies that the State's farming is vulnerable to vagaries of monsoon and high and frequent fluctuations in area covered and output and yield rate obtained.

Table-1: Gross Area Sown Vis-a-vis Gross Area Irrigated

Crop	Gross area sown (in lakh ha).	Gross area irrigated (in lakh ha).	Percentage of gross area irrigated to gross area sown
Foodgrains	32.09	20.37	63.5
Food crops	43.47	28.08	64.6
Non-food crops	15.42	7.10	46.0
Food and Non-food crops	58.90	35.19	59.7

Figure 1. Gross Area Sown / Gross Area Irrigated for 2011-12

1. Rainfall Pattern:

The share of each season in total rainfall is as follows: 57.7 per cent by north-east monsoon, 32.1 per cent by south-west monsoon, 9.2% by hot weather and 1 per cent by winter. Precipitation was excess during the north east monsoon, normal during south west monsoon deficit during hot weather and scanty during the winter season. The actual annual rainfall was put at 937.1 m.m. during 2011-12 against the normal rainfall of 921.6m.m. for the State. The actual precipitation exceeded the normal rainfall by 15.5 m.m.

During the south west monsoon, actual rainfall fell short of normal rainfall by 20.7 m.m. The deviation was much steeper during winter season (21.8 m.m.) and hot weather (41.6 m.m.). Season-wise quantum of rainfall received during 2011-12 is furnished below:

Above analysis shows that the northeast and southwest monsoons are by far the crucial seasons during which State received major quantum of rainfall. Ideal spatio temporal distribution of precipitation is a prerequisite for obtaining abundant farm output and higher yield rate.

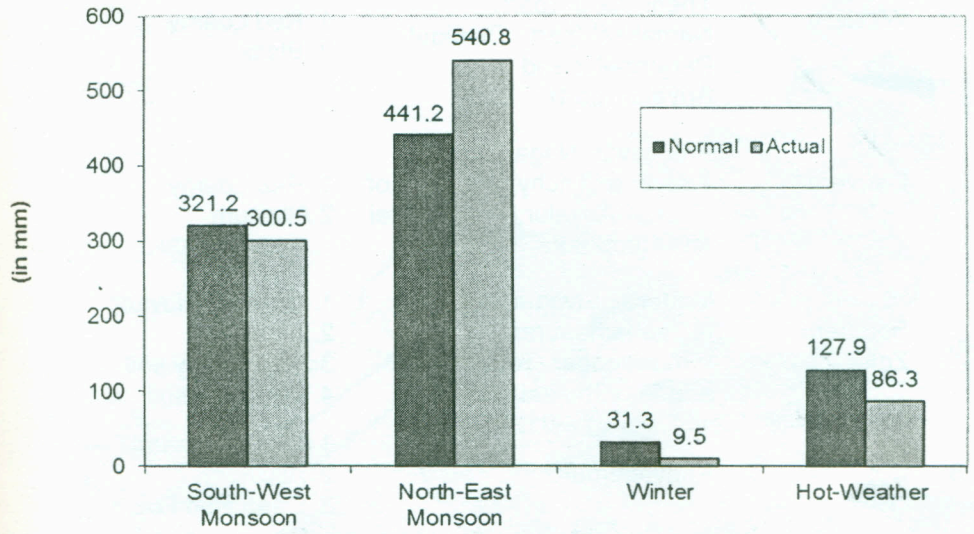

Table-2: Quantum of Rainfall Received by Season-2011-12

(in mm)

Season	Normal	Actual	Seasonal Contribution (percentage)	Percentage Variation to Normal
1. South-West Monsoon	321.2	300.5	32.1	-6.4
2. North-East Monsoon	441.2	540.8	57.7	22.6
3.Winter	31.3	9.5	1.0	-69.6
4.Hot-Weather	127.9	86.3	9.2	-32.5
Total	921.6	937.1	100.0	1.7

Excess rainfall 20% and above; Normal rainfall 19 % to (-) 19%
Deficit Rainfall (-)20% to (-) 59 %; Scanty rainfall (-) 60% to (-) 99%

Agro Climatic Zones in Tamil Nadu

1. Trend in Land Use Pattern:

. The total geographical area of the State is 1.30 crore ha. It has been classified according to different types of land during 2011-12 prescribed in the table below.

Table-3 - Trend in Land Use Pattern

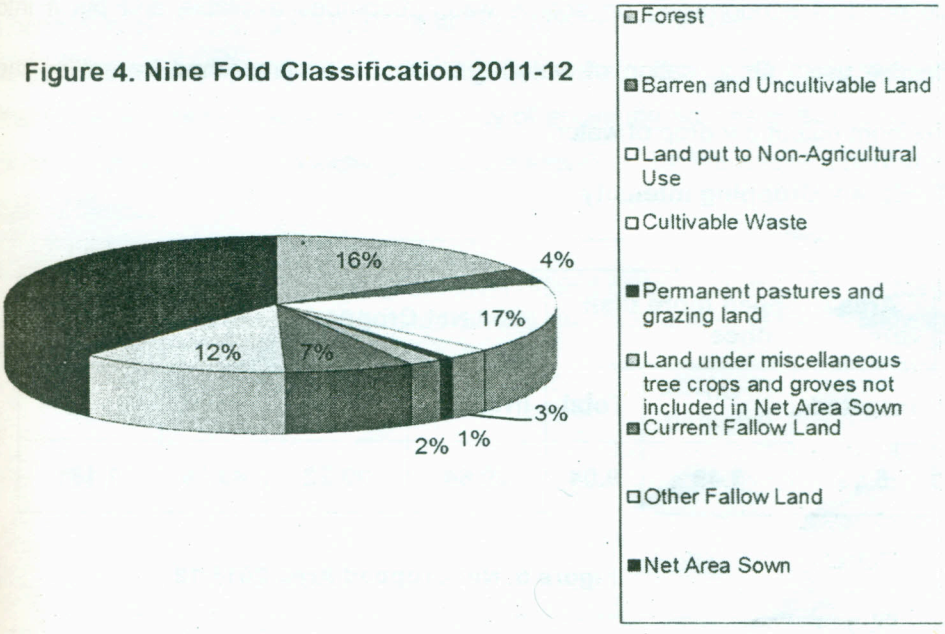

Sl. No.	Category	2010-11	2011-12
	Total Geographical Area	13033116 (100.0)	13033116 (100.0)
1.	Forest	2125475 (16.3)	2125475 (16.3)
2.	Barren and Uncultivable Land	489253 (3.8)	488557 (3.7)
3.	Land put to Non-Agricultural Use	2177034 (16.7)	2180732 (16.7)
4.	Cultivable Waste	330938 (2.5)	329117 (2.5)
5.	Permanent pastures and grazing land	109568 (0.8)	109568 (0.8)
6.	Land under miscellaneous tree crops and groves not included in Net Area Sown	252080 (1.9)	252468 (1.9)
7.	Current Fallow Land	1014937 (7.8)	967037 (7.4)
8.	Other Fallow Land	1580173 (12.1)	1594305 (12.2)
9.	Net Area Sown	4953658 (38.0)	4985857 (38.3)

Figures in brackets indicate percentage to Total Geographical Area.

The table reveals that very small variations were being noticed under current fallow and other fallow and net area sown. During this period the land put to non agricultural uses less than the last year which reveals that the area available for cultivation is being converted in to non agricultural use. The share of

total forest cover still falls short of one-third of the norm, as recommended by the National Commission on Agriculture. It is of paramount importance that not only the extent of forest cover but also the quality and productivity of forest are to be improved to a great extent.

Figure 4. Nine Fold Classification 2011-12

3. Cropping Intensity:

Net Area sown increased from 49.54 lakh ha. during 2010-11 to 49.86 lakh ha. during 2011-12 registering, a growth rate of a meager 0.65 percent. The improvement in area sown more than once rose by 13.12 percent. Gross area sown increased by 2.4 percent during this period. Cropping intensity i.e. gross area sown divided by net sown area was at 1.18 during 2011-12 compared to 1.16 during the previous year. Cropping intensity is a measure of both quantum and

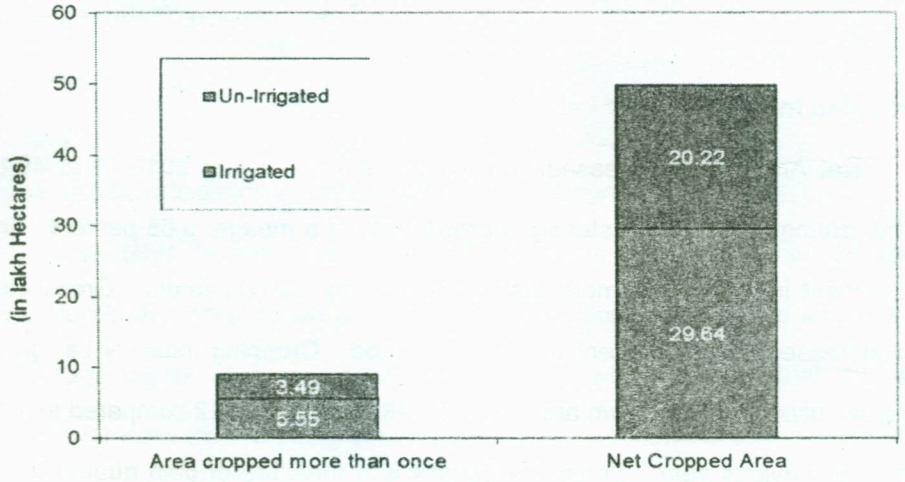

spread of precipitation, soil moisture index and gross area irrigated. Tamil Nadu agriculture is water-starved so that the cropping intensity is not of higher order. Cropping intensity was found highest in Thiruvarur (1.814) and Nagapattinam (1.814) and lowest in Ramanathapuram (1) and The Nilgiris (1). The State is in dire need of economizing on scarce water resources available and put it into effective use. Optimization of water use can be accomplished by getting the maximum output per drop of water.

Table 4 : Cropping Intensity

(in lakh ha.)

Area Cropped more than once			Net Cropped Area			Cropping Intensity
Irrigated	Un-irrigated	Total	Irrigated	Un-irrigated	Total	
5.55	3.49	9.04	29.64	20.22	49.86	1.181

Figure 5. Net Cropped Area 2011-12

4. District Contribution to Net Area Sown:

Out of the total geographical area of 1303316 ha., Villupuram district accounted for a sizeable net area sown of 332220 ha. (6.72), other districts whose share exceeded 4 per cent mark are: Cuddalore (4.4 %), Salem (4.6 %), Thiruvannamalai (4%), Thanjavur (4%), Dindigul (4.8 %). The productivity of land depends upon a host of factors such as fertility of soil, climate and weather, richness in pH.* level, availability of all minerals and other required soil nutrients and abundance of precipitation and irrigation water. It may be mentioned that there are vast differences in the availability of above ingredients of soil across the districts. Difference in productivity level are explained by the availability of these critical factors.

* pH is a measurement of the level of acid or alkali in the soil. In the pH range of 0 to 14 a reading of below 7 shows an acidy and of above 7 shows an alkali.

322-15—7

Table-5 District Contribution to Net Area Sown 2011-12

(In ha.)

Sl. No.	District	Total Geographical Area	Net area sown	% of net area sown to	
				Geographical area	State total
1.	Chennai	17098	0	0.0	0.0
2.	Kancheepuram	443210	110872	25.0	2.2

	TOTAL	**13033116**	**4985857**	**38.3**	**100**

5. Sources of Irrigation:

Sources of irrigation comprise canals, reservoirs, tanks and wells (tube wells and open wells). Out of the total sources of 1820844, open wells alone accounted for 82.70 per cent, tube wells 17.3 per cent, tanks (2.26%), reservoir (0.04%) and canals (0.13%). It may be concluded that wells are single largest source of irrigation, owned both by individuals and Government.

Table 6: Sources of Irrigation 2011-12

Source	Number
1. CANALS a) Govt.	2237
b) Private	2
2. RESERVOIRS	81
3. TANKS

b) Private	314434
Total	**315000**
B) OPEN WELLS	
a) Govt.	372
b) Private	1505472
Total	**1505844**
TOTAL NO. OF WELLS (A+B)	**1820844**

6. Area Irrigated by Different Sources:

Even though canals and tanks formed relatively a lower share in terms of number of sources, they constituted a larger share to total in area irrigated. Sourcewise canal irrigated an area of 746337 ha., tanks 527892 ha., wells 1682957 ha. and others 6835 ha. out of the total net area irrigated of 2964027 ha. Share of canals, tanks, wells and others in net area irrigated was in the order of 25.2 per cent, 17.8 per cent, 56.8 per cent and 0.2 per cent during 2011-12.

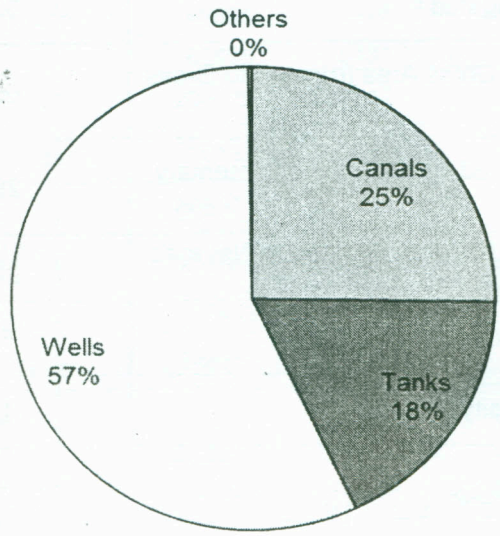

It may be mentioned that the tanks where the SIDA-aided Social Forestry Plantations raised, sedimentation had been formed with the result the water-holding capacity of the tanks got diminished. It is indispensable to deepen the irrigation tanks under the Mahatma Gandhi Rural Employment Guarantee Scheme. Ultimately, the additional area may be brought under cultivation or the quantum of water stored will prolong the period of irrigation or both.

Table – 7 : Source-wise Net Area Irrigated

(in ha.)

Sources		Net Area Irrigated			
		2011-12		2010-11	
		Area	%	Area	%

	TOTAL	2964027	100.0	2912129	100.0

Figure 6. Sourcewise Net Area Irrigated 2011-12

322-15—8

Gross area irrigated was put at 35.19 lakh ha. Percentage of gross area irrigated to gross area sown came to be 42. Percentage of net area irrigated to net area sown worked out to 58.78 during 2011-12. **Irrigation intensity**, a measure of gross area irrigated area to net area irrigated stood at 1.19. Irrigation intensity was highest in Dharmapuri (1.46) and Salem (1.44) and lowest and The Nilgiris (1), Ramanathapuram (1) and Sivagangai (1). Irrigation intensity is a crucial indicator with which we may size up the potential output that can be realized in a region. Higher the irrigation intensity, higher will be the scope for raising potential agricultural output. Therefore, the degree of irrigation intensity is to be stepped up to meet the challenges of growing population. In this context, additional irrigation potential is to be created and harnessed through construction of large, medium and command area development projects.

Table – 8 – Irrigation Intensity

(lakh ha.)

1.	Gross Area Irrigated	:	35.19
2.	Percentage of Gross Area Irrigated to Gross Area sown	:	60.42
3.	Net Area Irrigated excluding supplementary wells	:	29.64
4.	Percentage of Net area irrigated to Net area sown	:	58.78
5.	Area Irrigated more than once	:	5.55
6.	Irrigation Intensity	:	1.19

7. Crop wise Gross Area Irrigated:

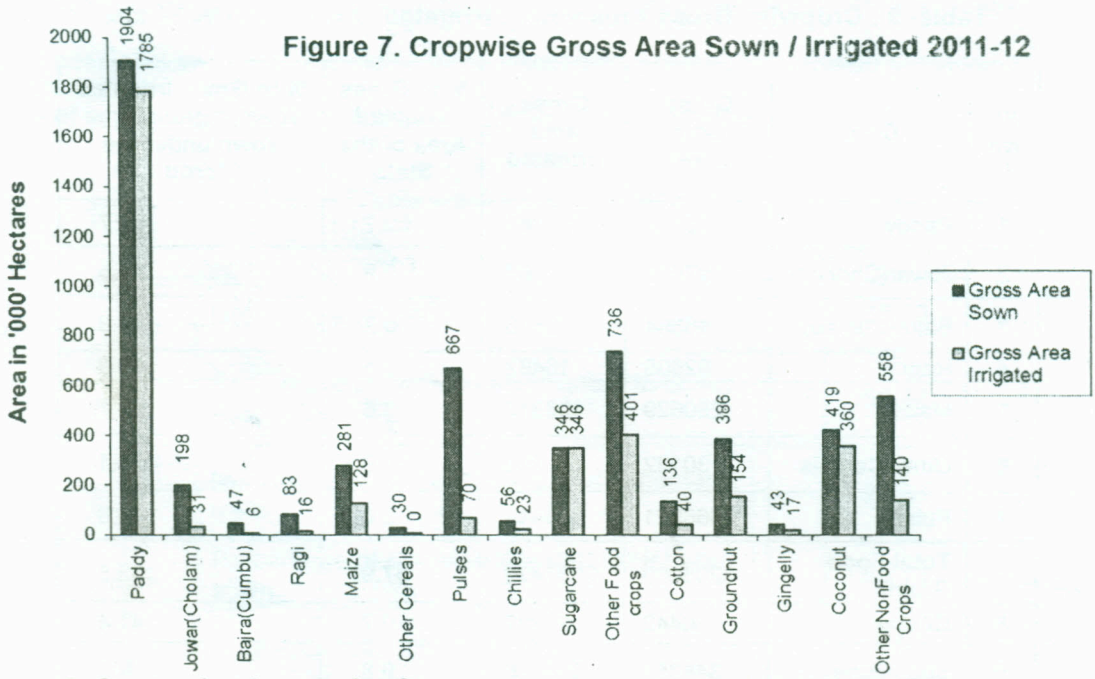

Out of the total gross area of 3518822 ha. irrigated food crops consisted of 79.80 per cent and non-food crops 20.20 per cent during 2011-12. Paddy constituted a sizeable area of 1784762 ha. (50.77%). Total pulses contributed 10.6 per cent to total irrigated area of 70444 ha. Non-food crops coconut accounted for 10.22 per cent, followed by groundnut 4.39 per cent. The gross area irrigated increased by 5.12 per cent from 3347557 ha. during 2010-11 to 3518822 ha. during 2011-12.

Table- 9 : Cropwise Gross Area sown / Irrigated and its relative share

Sl. No	Crop	Gross area sown	Gross area Irrigated	% to Gross Irrigated Area of the State	% to Gross Irrigated Area to gross Area sown under the crop

Figure 7. Cropwise Gross Area Sown / Irrigated 2011-12

8. Group wise Area under Crops:

The area under crops soared from 5752664 ha. during 2010-11 to 5889672 ha. During 2011-12, the growth rate being 2.38 per cent. Food grains

accounted for 54.48 per cent of total area of 5889672 ha. during 2011-12. Under other food groups sugarcane constituted 6.08 per cent and fruits and vegetables 6.62 per cents. Under non-food crops the share of oilseeds, fodder crops and fibre stood at 14.85 per cent, 4.07 per cent and 2.31 per cent respectively.

Figure 10. Districtwise Area under Paddy 2011-12

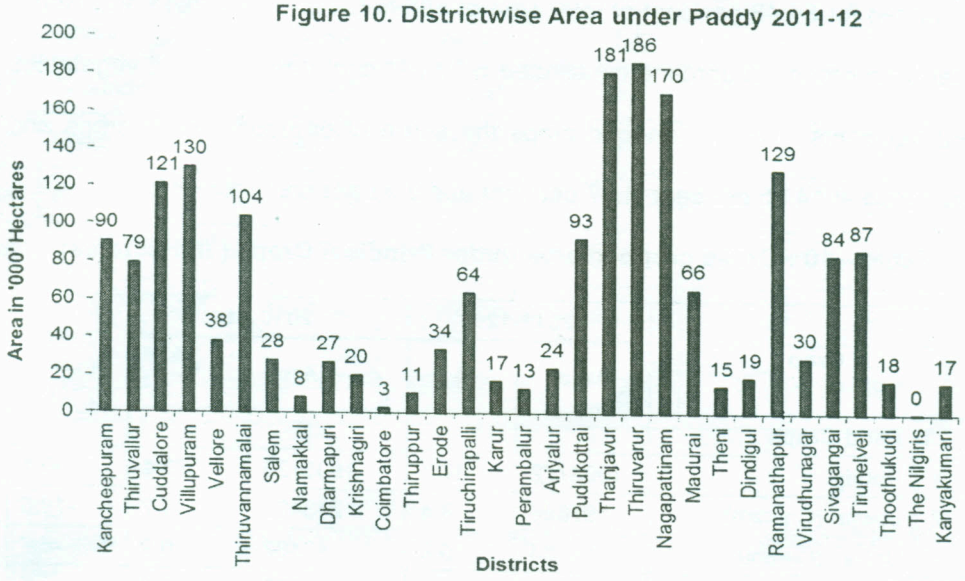

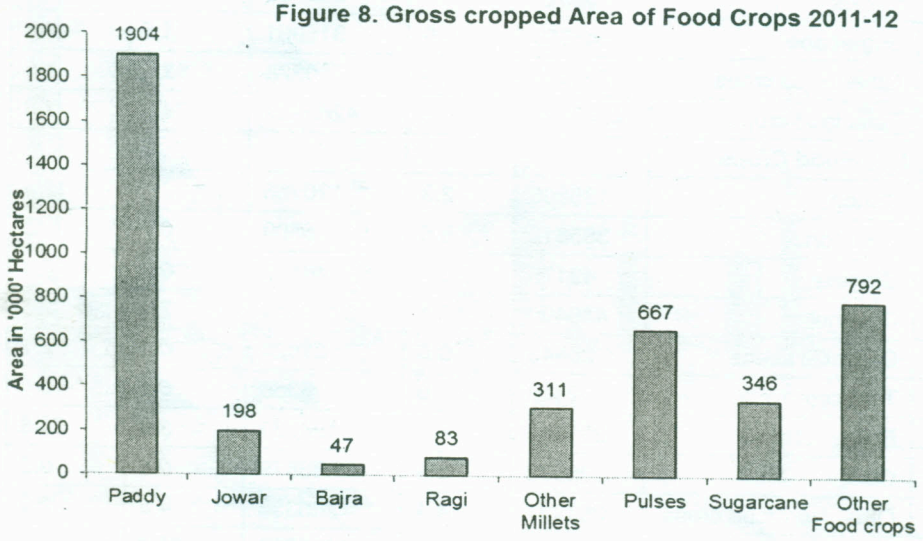

Figure 8. Gross cropped Area of Food Crops 2011-12

Out of 101.52 lakh ha. of total foodgrains, rice alone accounted for 73.47 percent, followed by maize (16.70) and pulses (3.64). Cereals made up 96.36 percent of total foodgrain production during 2011-12. There was a vast difference between production level of 2010-11 and 2011-12 to the tune of 34 percent

Table – 11 : Cropwise Production of Foodgrains

Crop		2011-12		2010-11

9. Area under Food Crops:

9.1 Paddy:

Paddy is the staple crop of the State. It is worth noting that the Mettur Reservoir was opened on 5.6.2011 well in advance of scheduled date of opening of 12th June. It was first time in the history of the Mettur Reservoir. Paddy is being raised in three seasons – Kar / Kuruvai / Sornavari, Samba / Thalady / pishanam and Navarai / Kodai. During 2011-12 paddy covered an area of 1903772 ha. of which 178462 ha. (93.75%) was irrigated and 119010 ha. (6.25%) was unirrigated. Districts of Thiruvarur, Nagapattinam and Thanjavur district put together accounted for 28.22 per cent of total area under paddy.

Table – 12 : Distribution of Area under Paddy by Districts 2011-12

(in ha.)

	DISTRICT	Area under Paddy	% to State	Gross Cropped area	% of Paddy area to Gross Cropped area
1	Chennai	0	0	0	0
2	Kancheepuram	90419	4.7	126642	71.4
3	Thiruvallur	79219	4.2	133148	59.5

32	Kanyakumari	16617	0.9	87676	19
STATE		**1903772**	**100**	**5889672**	**32.3**

As far as paddy crop is concerned, paddy is a hydrophilic crop or water guzzler, i.e., it requires a lot of irrigation water – high duty crop. If the water is scarce, it impinges upon the area, production and productivity of rice crop to a great extent.

Figure 10. Districtwise Area under Paddy 2011-12

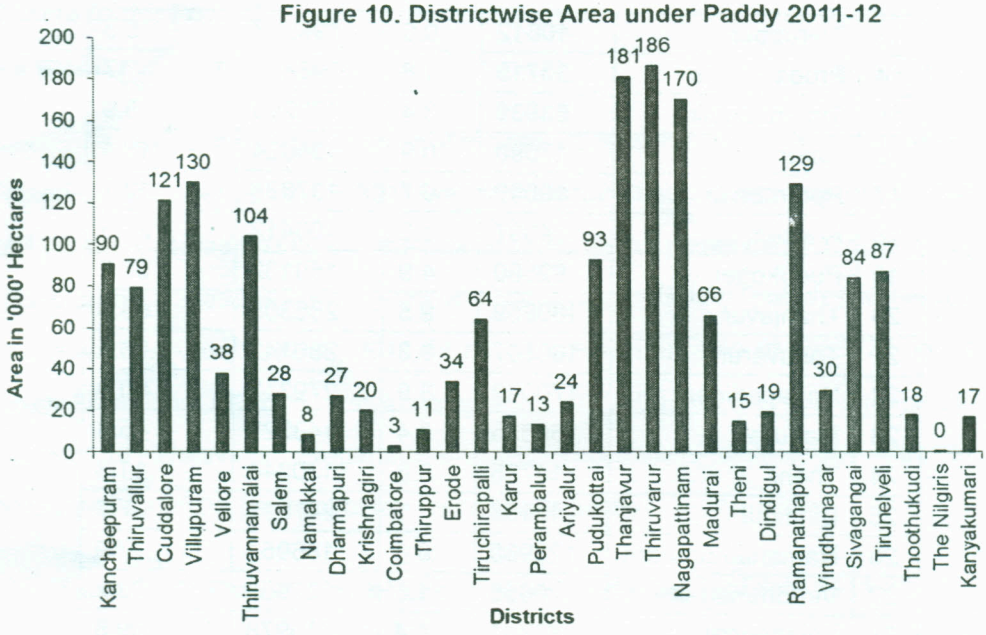

Table – 13 : Paddy- Area, Production and Yield Rate

Season	Area in ha			In terms of Rice					
				Production in tonnes			Productivity in Kg/ha.		
	2011-12	2010-11	% Var.	2011-12	2010-11	% Var.	2011-12	2010-11	% Var.
1.Kuruvai	335715	293030	14.6	1384666	1046910	32.3	4125	3573	15.4
2.Samba	1444271	1480531	-2.4	5592375	4273700	30.9	3872	2887	34.1
3.Navarai	123786	132165	-6.3	481616	471805	2.1	3891	3570	9
All Seasons	1903772	1905726	-0.1	7458657	5792415	28.8	3918	3039	28.9

Seen seasonwise, samba crop accounted for 75.86 per cent of area of 19 lakh ha. under paddy, and 74.95 per cent of total rice production of 74.59 lakh

tonnes. Next to Samba, Kar season formed 17.64 per cent of area and 18.56 per cent of total production. Contribution of Navarai crop stood at 6.50 per cent in area coverage and 6.47 per cent in total production of rice. Seen districtwise, districts of Thanjavur and Thiruvarur combined together made up 28 per cent of total production of 74.59 lakh tones of rice.. The erstwhile Thanjavur district contines to be rice bowl of Tamil Nadu. In terms of yield rate, yield rate exceeded 5 tonne mark in the districts of Kanyakumari, Thirunelveli, Dindigul and Theni, whereas in Cuddalore district it was lowest (2052 Kgs/ha.). The System of Rice Intensification (SRI) Scheme which is cost-effect and output-enhancing innovative intervention has come a long way in augmentation of production and yield rate of rice. The SRI is based on basic principles like developing a nursery rice in soil nutrients and does not require flooding, early planting of single seedling in the main field using nylon ropes as markers and planting with a wider spacing between single seedling. Second generation green revolution in rice cultivation is long overdue in the State.

9.2 Cholam

Cholam is rich in carbohydrate. As economic development takes place, its prominence of cholam in food basket has been on the decline. During 2011-12 area under cholam was put at 197696 ha. This crop was predominant in the districts of Coimbatore, Thiruchirappalli and Dindugal. These districts combined together made up 39 per cent of total area of 197696 ha. Total production worked out to 252522 tonnes whereas yield rate was at 1277 kgs.

322-15—10

Yiled rate was highest in Theni district (3375) and lowest in Namakkal district (855 kg/ha.)

Cholam covered an area of 197696 ha. during 2011-12 against 243465 ha during 2010-11, the decline being 18.8 per cent whereas the total production of cholam increased by 2.2 per cent from 246981 tonnes to 252522 tonnes. There was a spectacular increase of 25.9 per cent in yield rate-1014 kgs/ha to 1277 kgs/ha. Relevant information is shown below.

Table-14 Cholam – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	197696	243465	-18.8
Production (in Tonnes)	252522	246981	2.2
Yield rate (in Kg/ha)	1277	1014	25.9

9.3 Cumbu:

Like cholam, cumbu is rich in carbohydrate. Its prominence in food basket has been on the decrease. During 2011-12 it covered an area of 46664 ha. during 2011-12. Villupuram district alone accounted for a share of 27.48 per cent.

Production was at 11447 ha. and yield rate was put at 2453 kgs/ha. Since this crops is raised in rainfed condition, there is a vast gap between potential and actual yield. Yield rate was highest in Thoothukudi district and lowest in Tiruvallur district.

With respect to cumbu area declined by 5.7 per cent from 49482 ha. durin g2010-11 to 46664 ha. during 2011-12. There was a leap frogging growth 47.9 percent with regard to production which increased from 77369 tonnes to 114447

tonnes. The quantum jump of 56.8 percent was noticed with respect to yield rate – 2453 kgs/ha. vis-a-vis 1564 kgs/ha.

Table-15 Cumbu – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	46664	49482	-5.7
Production (in Tonnes)	114447	77369	47.9
Yield rate (in Kg/ha)	2453	1564	56.8

9.4 Ragi:

Ragi crop is rich in carbo-hydrate having high fibre content. Ragi is instrumental in reducing malnutrition and undernutrition, and contributes significantly to psychological development of the children. The district of Dharmapuri and Krishnagiri constituted 74 per cent of total ragi area of 82805 ha. Total production stood at 224862 tonnes. Average yield rate was at 2716 kgs – it is highest in Dharmapuri (3013 kgs/ha.) and lowest in Ramanathapuram (1709 kgs/ha.)

Table-16 Ragi – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	82805	75650	9.5
Production (in Tonnes)	224862	171096	31.4
Yield rate (in Kg/ha)	2716	2262	20.1

9.5 Maize:

Maize is a multipurpose cereal. Demand for this produce is on the increase. During 2011-12 this crop covered an area of 280629 ha. – Perambalur and Dindugal district accounted for a larger chunk of 29 per cent out of 280629 ha. Total maize production worked out to 1695467 tonnes. Average yield came to 6042 kgs/ha. Thiruppur stood first (8221 kgs/ha.) in yield rate. It was lowest in Cuddalore district (1746 kgs/ha.) There is an urgent need to bring additional area under maize and step up in yield rate significantly in view of growing population and increasing demand for it.

9.6 Pulses:

As population, per capita income and urbanization are burgeoning, the demand for pulses goes up. Demand for pulses is income-elastic. Past trend shows that the fortunes of agriculture are widely fluctuating. In tune with the vagaries of monsoon, there are swings in the supply of pulses. Eventually, there is an upward trend in the prices of pulses. In order to arrest the unbridled rising prices of pulses, cultivation of pulses should get a thrust in crop planning. There is an urgent need to boost the pulses production to meet the challenges of pulses requirement.

Among pulses blackgram accounted for 53.40 per cent in terms of area and 45.84 per cent in terms of production. Next to blackgram, greengram contributes sizeably to area and production of total pulses. As pulses are being

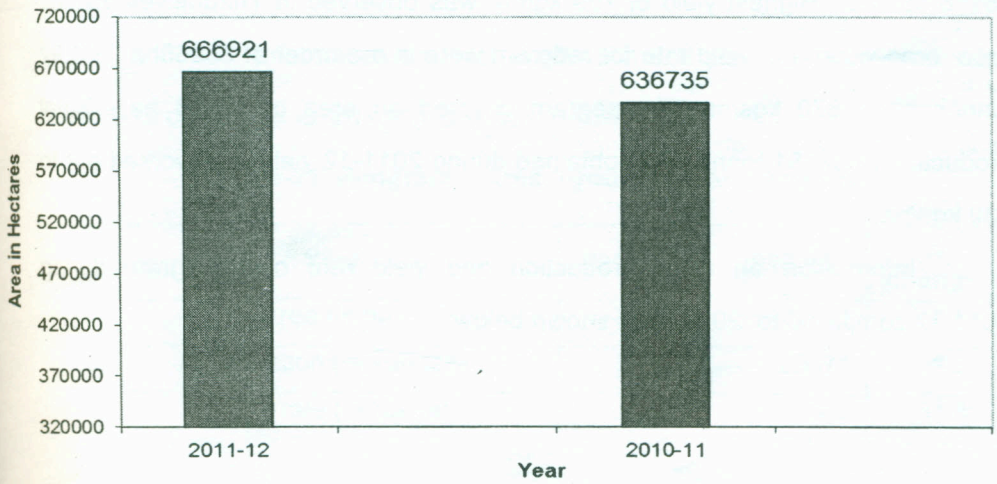

raised both in irrigated and rainfed conditions, there exists a vast untapped potential in all the districts.

Table-17 Pulses – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	666921	636735	4.7
Production (in Tonnes)	369263	245191	50.6
Yield rate (in Kg/ha)	554	385	43.9

Area under pulses increased by 4.7 percent from 636735 ha. during 2010-11 to 666921 ha. during 2011-12. Production level rose from 245191 tonnes to 369263 tonnes, the growth being an impressive 50.6 percent. There was an increase of 44 percent in yield rate.

Figure 11. Area of Pulses 2010-11 and 2011-12

322-15—11

Table - 18 – Variety-wise Area, Production and Yield Rate of Pulses

Variety	Area (ha)	%	Production (tonnes)	%	Yield (kg/ha)
i. Redgram	35968	6.23	31292	8.02	870
ii. Greengram	164069	28.42	85118	21.82	519
iii. Blackgram	308263	53.40	178816	45.84	580
iv. Horsegram	68969	11.95	37181	8.15	539

Blackgram is predominantly grown in the districts of Cuddalore, Nagapattinam and Thiruvarur. These three districts combined together made up 47.58 per cent of total area of 308263 ha. during 2011-12. Cuddalore district (29656 tonnes) came first in total production of 178816 tonnes. Thirunelveli district realized an yield rate of 959 kgs/ha. With respect to greengram an area of 164069 ha. was covered during 2011-12, yielding an output of 85118 tonnes. This crop is predominant in the districts of Thiruvarur and Nagapattinam accounting for an 41 per cent of total area of 164069 ha. and 26 per cent of total production of 85118 tonnes. Highest yield of 769 kg/ha. was observed in Thirunelveli district. Area, production and yield rate for redgram were in the order of 35968ha., 31292 tonnes and 870 kgs/ha. Horsegram covered an area of 68968 ha. Total production of 37181 tonnes was obtained during 2011-12 yield rate worked out to 539 kgs/ha.

Information on area, production and yield rate of blackgram during 2011-12 compared to 2010-11 is shown below:

Table-19 Blackgram – Area, Production and Yield Rate

Item	2011-12	2010-11	% change
Area (in ha)	308263	304432	1.3
Production (in Tonnes)	178816	123011	45.4
Yield rate (in Kg/ha)	580	404	43.6

Information on area, production and yield rate of greengram during 2011-12 compared to 2010-11 is shown below:

Table-20 Greengram – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	164069	171666	-4.4
Production (in Tonnes)	85118	57683	47.6
Yield rate (in Kg/ha)	519	336	54.5

Information on area, production and yield rate of redgram during 2011-12 compared to 2010-11 is shown below:

Table-21 Redgram – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	35968	35751	0.6
Production (in Tonnes)	31292	23671	32.2
Yield rate (in Kg/ha)	870	662	31.4

9.7 Cashew:

Cashew is a rainfed crop. Value addition flows from cashew. It is a sizable foreign exchange earner. Cashew is predominantly grown in the district of Cuddalore, Pudukottai, Sivagangai, etc. Area under cashew increased by 0.3 percent from 96710ha. during 2010-11 to 97033 ha. 2011-12. Production went up from 39996 tonnes to 25532 tonnes, the growth being 0.4 percent Yield rate remained constant at 263 kgs./ha. Relevant information is furnished below:

Table-22 Cashewnut – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	97033	96710	0.3
Production (in Tonnes)	25532	39996	-36.16
Yield rate (in Kg/ha)	263	414	-36.47

9.8 Groundnut:

The importance of groundnut can hardly be overstated. There is a staggering imbalance between the demand for and supply of oilseeds in general and groundnut in particular. There is a vast gap between actual and potential yield. This crop is mostly raised as a rainfed one. Productivity falls short of the standard fixed by the Agricultural Universities. Out of 385612 ha. under groundnut, the districts of Thiruvannamalai and Vellore accounted for 26 per cent of total area. Total production stood at 1060654 tonnes of which Thiruvannamalai formed 40 per cent of production. Yield rate came to 2751 kgs/ha- highest in

Thiruvarur district (5629 kgs) and lowest in Ramanathapuram district (1390 kgs/ha).

Information on area, production and yield rate of groundnut during 2011-12 compared to 2010-11 is shown below:

Table-23 Groundnut – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	385612	385509	0.03
Production (in Tonnes)	1060654	895638	18.42
Yield rate (in Kg/ha)	2751	2323	18.42

9.9 Gingelly:

This crop has multiple uses – medicinal value and used as seasoning ingrediant in cooking. The crop covered an area of 43175 ha. The State produced an output of 26447 tonnes. Yield rate stood at 613 kgs/ha. during 2011-12. Gingelly in Erode district is predominant in terms of area, production and yield rate.

Table- 24 Gingelly – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	43175	48189	-10.4
Production (in Tonnes)	26447	25387	4.18
Yield rate (in Kg/ha)	613	527	16.3

9.10 Sunflower:

Sunflower is a value addition crop and is rich in oil content. The State covered an area of 13610 ha. obtaining a total production of 24622 tonnes and yield rate of 1809 kgs/ha. Karur district tops the list in terms of area, production and yield. It is imperative to realize the potential yield rate and expand the area coverage in years to come. This crop is exposed to the attack of parrot when the seeds become ripe. Farmer stand to lose on this account to a great extent.

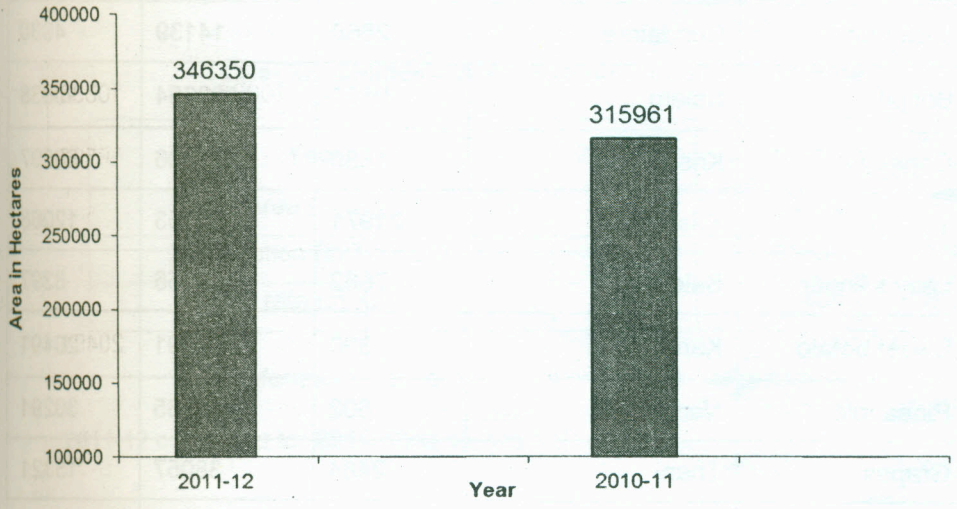

9.11 Sugarcane:

Sugarcane crop is a value addition crop besides being hydrophilic. Districts of Villupuram, Dharmapuri and Erode put together accounted for as high as 36.12 per cent of total area of 346350 ha. covered during 2011-12. Villupuram district headed the list with 8062159 tonnes (20%). District of Karur finished first in terms of yield per ha (137). Even though the State Government has been hiking the State Advised Price for sugarcane periodically, the farmers could not keep their head above water. Despite the fact that sugarcane is money spinner, the cultivation of this crop is stifled by a number of problems and constraints.

Table-25 Sugarcane – Area, Production and Yield Rate

Year	2011-12	2010-11	% change
Area (in ha)	346350	315961	9.6
Production (in Tonnes)	38974842	34251796	13.8
Yield rate (in Kg/ha)	113	108	4.62

Figure 12. Area of SugarCane 2010-11 and 2011-12

9.12 Fruits and Vegetables:

Demand for fruits and vegetables in income-elastic. They are value addition crops. It is imperative to augment the production and yields of these lucrative crops in the wake of swelling urbanization, growing real per capita income and bulging population. The shelf life of most of these crops is short-lived. Therefore demand side exerts heave pressure on prices of these fruits and vegetables. Market period is momentary. Table below delineates data on area, production and yield of fruits and vegetables.

322-15—13

Table – 26 : Area, Production and Yield of Fruits and Vegetables – 2011-12

Type	Predominantly growing District	Area (Ha)	Production (tonnes)	Yield Rate (kgs/ha)
1	2	3	4	5
Banana	Thoothukudi	103107	4505435	43695
Mango	Krishnagiri	141140	626392	4438
Jack fruit	Cuddalore	2868	14139	4930
Brinjal	Salem	9551	100654	10638
Cabbage	Krishnagiri	1889	114406	60597

26	Tobacco	4376	8209	*-46.7*	*1530*	*1530*	*-0.2*

10. Distribution of Number of Farmers and Operational Holdings:

According to the 9th Agricultural Census 2010-11 total number of farmers stood at 81.18 lakh having total operational holdings of 64.58 lakh ha. Per farmer holding size stayed at as low as 0.8 ha. which is uneconomic to cultivate. Out of the total 81.18 lakh farmers, marginal farmers accounted for 77 percent, followed by small farmers 14.56 percent and semi medium farmers, 6.19 percent. As regards distribution of total land holdings, 0.21 percent of large farmers possessed 5.39 percent of land holdings and medium farmers 13.06 percent. Marginal farmers held 35.48 percent of land holdings. The above figures do indicate that the distribution of land holding is much skewed. Asymmetry in the distribution of the operational holdings and number of farmers will result in low agricultural productivity and insufficient application of latest technology and package of critical inputs, low rate of saving etc. Concentration of marginal farmers in the distribution of land holdings explains the reason why they are doing subsistence farming for sustenance.

The supply curve of marginal farmer is backward-bending so that they have no incentive to work harder and prefer leisure to work after reaching a thresh-hold level of income. The concentration of marginal farmers implies that the **demographic** dividend available on the population front in the State cannot be reaped. Ultimately, the saving and investment will not be forthcoming at desired level for productive use.

Table – 34 – 9th Agriculture Census 2010-11 -Distribution of Farmers and Operational Holdings by Category of Farmers

Sl. No.	Category / Size	No.of holdings	% distribu tion	Size of operational holdings (ha.)	% distribu tion
1.	Marginal (upto 0.99)	6266372	77.19	2292031	35.32
2.	Small (1.00 to 1.99)	1181797	14.56	1643841	25.34
3.	Small Medium (2.00 to 3.99)	502332	6.19	1355476	20.89
4.	Medium (4.00 to 9.99)	150570	1.85	847372	13.06
5.	Large (10.00 & above)	17365	0.21	349517	5.39
	All sizes	**8118436**	**100.00**	**6488237**	**100.00**

11. Adoption of High Yield Varieties

Adoption of High Yield Varieties or miracle seeds is popular due to initiation of green revolution in the State as well as in the country since 1967-68. The miracle seeds are instrumented in enhancing the yield rate. Empirical evidence supports amply that in the post situation improvement in the productivity

322-15—15

is substantial compared to the pre-situation. The High Yield Varieties are being used in the cases of Paddy, Cholam, Cumbu and Ragi.

With respect to paddy, High Yielding Varieties covered an irrigated are of 17.44 lakh ha. Out of the total 17.89 lakh ha. unirrigated area in which the high yield varieties were adopted was 3 percent. Local variety of paddy accounted for only 6 percent during 2011-12. Regarding cholam, 88 percent of 1.98 lakh ha. was covered by high yield varieties and the remaining area of 12 percent was covered with local varieties.

With respect of cumbu an area of 43746 ha. (94%) used the high yield variety seeds whereas an area of 2918 ha. (6%) adopted local varieties. Regarding Ragi crop, adoption of high yield varieties worked out to 95 percent.

Figure 13. Distrinuion of Farmers and Number of Holdings as per Agriculture Census 2010-11

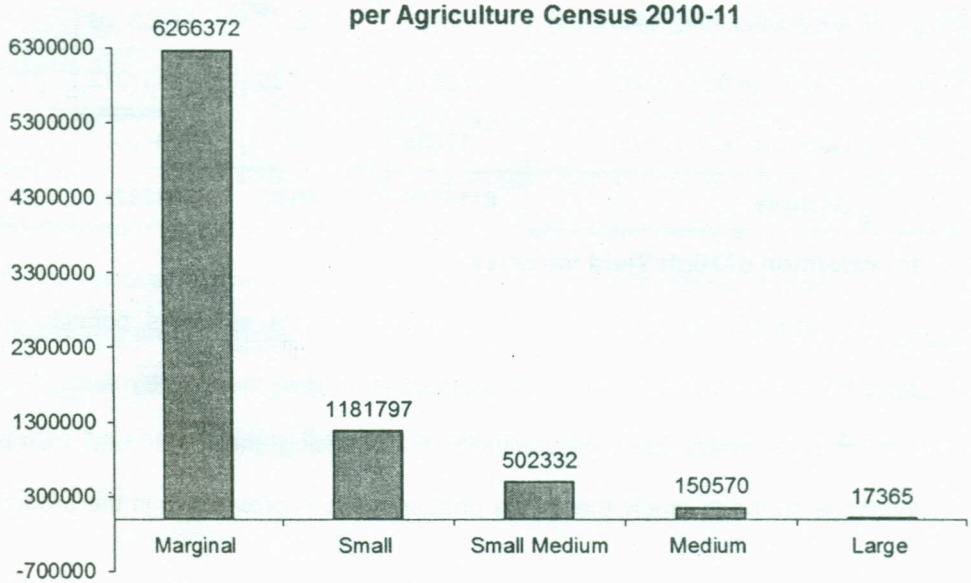

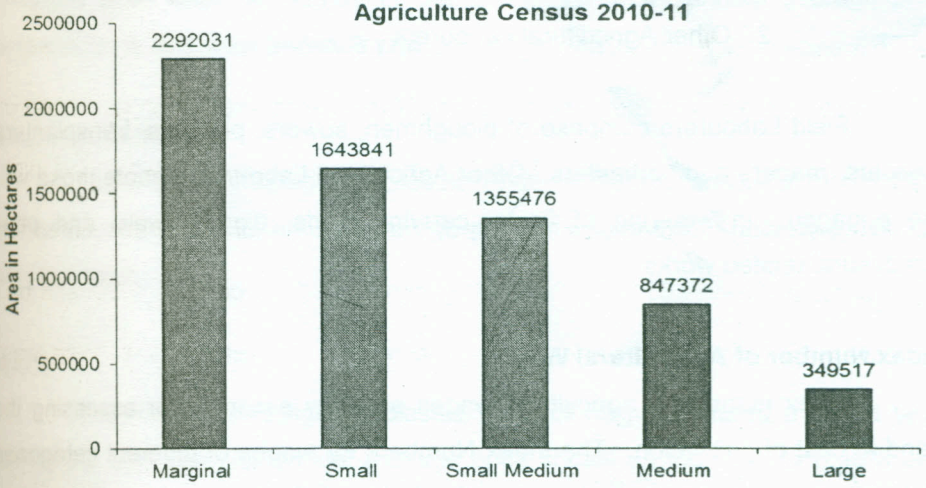

Figure 14. Distribution of Farmers and Area of Holdings as per Agriculture Census 2010-11

The above analysis boils down to this: adoption rate of high yield varieties for paddy neared centum whereas it was more than 90 percent for cholam, ragi and cumbu. It underlines that the penetration of the adoption of high yield varieties is found deeper thanks to the advent of the green revolution. It is imperative to cover uncovered crops and fill the gap found in the crops already covered so that the productivity of all crops will go up and meet the total food requirements of the State population.

8. Agricultural Wages

Classification of Agricultural Labourers:

Statistics regarding daily wages paid to Agricultural Labourers are being collected every month from 385 villages, @ one Villages per Block. The Agricultural Labourers are classified into two groups, viz.,

1. Field Labourers and
2. Other Agricultural Labourers

Field Labourers comprise of ploughmen, sowers, pluckers, transplanters, weeders, reapers and harvesters. Other Agricultural Labourers denote those who are engaged in watering of fields, carrying loads, digging wells and other Agricultural related works.

Index Number of Agricultural Wages

Index number of agricultural wages are very essential for assessing the trend in cost of cultivation. The Index Numbers for wages of different categories of Labours are being worked out on the basis of the wages prevailing in the selected villages in the state with the base year 1993-94. District-wise details of average rates of daily wages paid to certain categories of agricultural labourers for 2010-11 are given in Table VI -A. Index Number of wages paid to certain categories of agricultural labourers in Tamil Nadu for the year 2010-11 are furnished in Table VI –B.

9. WHOLESALE PRICE TREND PER QUINTAL

RICE COMMON

The monthly Average Wholesale Price of Rice Common reveals an mixed trend during the fasli year. The maximum price was Rs.2411.38 in February 2012 and minimum price was Rs.1924.02 in August 2011. Its annual average price registered an increase of 8.07% in the current year when compared to the previous year.

JOWAR (CHOLAM)

The monthly Average Wholesale Price of Cholam reveals mixed trend during the fasli year. The maximum stood at Rs.1696.47 in May 2012 and the

minimum price was Rs.1435.67 in September 2011. Its annual average price increased in 8.70% over previous year.

BAJRA (CUMBU)

The monthly Average Wholesale Price of Cumbu shows a mixed trend during the fasli year. Its annual average price shows a 8.89% increase over the previous year.

RAGI

The monthly Average Wholesale Price of Ragi registered a mixed trend during the fasli year. Its annual average price shows an increase of 8.48% over the previous year.

BENGALGRAM

The monthly Average Wholesale Price of Bengal Gram revealed mixed trend during the fasli year. Its price varying between Rs.3863.38and Rs.5010.67. The annual average shows 17.18% increase over the previous year.

REDGRAM

The monthly Average Wholesale Price of Redgram registered a mixed trend with minimum price of Rs 4850.00 in July 2011 and a maximum of Rs. 5241.55 in January 2012. Its annual average shows an increase of 1.02% over the previous year.

BLACKGRAM

The monthly Average Wholesale Price shows a mixed trend with the price ranging between Rs.4556.36 and Rs.5394.98. Its annual average shows a increase of 1.02% over the previous year.

GREENGRAM

The monthly Average Wholesale Price of Greengram shows a mixed trend during the fasli year. Its annual average price shows 7.23% increase over the previous year.

GROUNDNUT PODS

The monthly Average Wholesale Price of Groundnut Pods shows a mixed trend. The annual average price registered mild increase of 22.39% over the previous year.

GINGELLY SEED

The monthly Average Wholesale Price of Gingelly Seed registered a mixed trend during the fasli year. Its annual average price shows a increase of 6.51% over previous year.

CANEGUR

The monthly Average Wholesale Price of Canegur registered a mixed trend. Its annual average price shows 8.90% increase over previous year.

CHILLIES

The monthly Average Wholesale Price of Chillies shows a mixed trend during the fasli year. Its annual average price increased of 18.27% when compared to the previous year.

CORIANDER

The monthly Average Wholesale Price shows a mixed trend during the fasli year with the maximum price stood at Rs6950.22 /-in February 2012 and the minimum price was Rs.5758.84 in June 2012-. Its annual average shows a increase of 18.27% over previous year.

TURMERIC

The monthly Average Wholesale Price of Turmeric shows a mixed trend during the fasli year. The maximum price of 11394.31 during July 2011 and minimum price of Rs.9162.68 in June 2012. Its annual average price shows an decrease of 25.12% over previous year.

TAMARIND

The monthly Average Wholesale Price of Tamarind shows a mixed trend during the fasli year. Its annual average price shows a increase of 6.68% over previous year. Month wise trend in average wholesale price of essential commodities is furnished in Table-VII-B.
