Agro Advisory

Crop	Stage	Advisory
General		<p>Drizzling or light rainfall is expected during next week with wind speed of 4 -10 km/hr in western zone districts.</p> <p>By utilizing the favourable weather and soil moisture, complete all the postponed sprays, fertilizer application and weeding during non rainy period.</p>
Rice	Vegetative	<p>Prevailing weather condition is favourable for false smut attack in rice. To control 1 ml propiconazole or 1ml hexaconazole or copper oxychloride 2.5 g/lit or copper hydroxide 2.5 g/ lit. If required repeat the spray at 15 days interval.</p> <p>Since weather condition is favourable for blast incidence in rice farmers are requested to monitor the crop carefully and spray initially with tricyclozone @ 1g / litre followed by second spray with 1g carbendazim / litre of water.</p> <p>Because of low temperature and high relative humidity, infection from bacterial leaf blight is expected in rice crop. To control spray Streptomycin sulphate + Tetracycline combination 300 g + Copper oxychloride 1250 g/ha or Copper hydroxide 2g/lit of water. If necessary repeat 15 days later.</p>

Coconut		This is best time for second dose application of fertilizer to coconut at 650 g urea + 1 kg super phosphate + 1 kg muriate of potash / tree.
Animal Husbandry		Considering the monsoon season, and consumption of grasses, deworming may be given to sheep, goat, cattle and milch animals. Prevailing temperature is low during day and night. Provide adequate heating to young birds.

SMS advisory

- Prevailing temperature is low during day and night. Provide adequate heating to young birds through lights and gunny bags screens.
