Agro Advisory

Crop	Stage	Advisory
General		Drizzling to light rainfall is expected and few places along the
		western Ghat may get summer rainfall with wind speed of 8-14
		km/hr.
		Rising temperature may bring summer rain during afternoon hours
		with lightening and thunders.
		Irrigation may be done based on soil moisture and apply crop residue
		mulches to all irrigated crops to maintain sufficient soil moisture.
		Plan for summer ploughing against the slope with soil inverting type
		ploughs.
Sugarcane	Vegetative	Since continuous dry weather prevailed in some parts of the district is
		favourable for the early shoot borer attack in sugarcane hence farmers
		are requested to do irrigation frequently and do mulching if rain is not
		occurred.
Banana		Considering the local circulation due to increased temperature and
		expected summer rains, provide propping to the banana of more than
		five months old to prevent from lodging.

Coconut	Summer rains during next two months may be harvested in root zone		
	of coconut by deepening the tree basin with inward slopes. Till then,		
	ensure to provide 100 liters of water per tree per day to maintain the		
	productivity.		
Animal	Increasing temperature and decreasing relative humidity may cause		
Husbandry	discomfort to the animals. Hence, provide clean water to both animals		
	and poultry.		
	To avoid the heat stress to animals feed the animal during night or		
	early morning or late evening hours.		
	Summer rains may occur as thunder storm during the afternoon hours.		
	Safeguard the animals.		

SMS advisory

> By utilizing the light rainfall, summer ploughing against the slope may be done with soil inverting type ploughs to arrest erosion and harvest water in root zone.
