I request that the following message may kindly be published in your esteemed daily:

TNAU granted a design patent for Mango Bagger cum Harvester

The Controller General of Patents at the Patent Office, Designs, and Trade Marks in Kolkata has granted a design patent to Tamil Nadu Agricultural University for the invention of a Mango Bagger cum Harvester. This innovative device serves a dual purpose: it is designed for both bagging and harvesting mangoes. The Mango Bagger cum Harvester includes a grabbing unit, a bagging unit, a height-adjustable pole, and a handle. The pole can extend up to 4.5 meters, enabling effective harvesting. This tool allows users to harvest mangoes easily while minimizing the risk of mechanical injuries. It also bags mangoes that are out of reach, helping to protect the fruits from pest and disease infestations during maturation. As a result, the quality of the mangoes is significantly improved.
